Colonel Administration

Foreword

by The

Commander

of

the Rhodesian Army

Lieutenant General G. P. Walls, OLM, MBE.

In these days the Rhodesian public is probably more closely connected with its Army than ever before in our country's history. There can be few families who do not have more than a passing interest in the Army by virtue of friends or relatives who are serving in some capacity, in the Regular service, Territorial force or Reserve, on National Service or "Dads" Army.

However, it is doubtful if many people are fully conversant with the widely varied aspects and requirements of Army life, and it is to this end that "A Pride of Men" has been conceived.

In the following pages you will see that the Army is comprised of many jobs within the embracing whole – and each of these jobs is equally important in its own way as any other.

"The soldier" is a fighting man, a clerk, a doctor, a teacher, a mechanic, an attorney – a specialist in any one of a score of professions – but withal still a soldier. And as a soldier, he is a man, a human being with a hierarchy of needs.

The Army is far from the impersonal organisation it is sometimes considered to be, and this point, I feel sure, is well illustrated here.

I believe you will read the articles with interest and share my own pride in the men who continue to uphold the fine traditions of their forebears.

> G. P. WALLS Lt Genl

Thinking ahead on your account.

Banking has come a long, long way with Barclays. Today we are able to offer over 50 different services, many of them unique, to make a richer life for all our customers.

Barclays Bank International Limited. (Registered Commercial Bank-Incorporated in the United Kingdom)

What the fashionable woman will be wearing this year.

These are the uniforms of the Rhodesian Womens Services, the forces' newest unit. Right now we'd like to hear from women who'd like to wear one of these uniforms. Women who would be proud to join the Rhodesian Army or Air Force.

As a serving member of RWS you'll find opportunities to specialise in one of the many types of employment offered. You could be assisting in the Operations Room or carrying out vital Intelligence duties. You might be establishing important radio links as a Radio Operator or working in Air Traffic Control. These are just a few

THE MAN AT THE TOP.

Dynamic, totally dedicated to the job, and popular with his troops at all levels — that's Lieutenant General Peter Walls, Commander of the Army

A NARMY is only as good as its leader. That's why, I venture to suggest, the Rhodesian Army is a second-to-none fighting force of enthusiastic professionals.

The man at the top was just 46 when he was appointed Army Commander, and thus there's never been any pomposity, any trace of fuddy-duddy rigidity in outlook.

Dynamic, totally dedicated to the job, Lt Genl G. P. (Peter) Walls, OLM, MBE, Commander of the Army, is popular with his troops at all levels, which is the greatest accolade any commander could hope for.

for. "He's a fine soldier," said one corporal to me.

His prime concern

"You feel you can chat to him about almost anything over a beer, when he visits you out in the sticks," a subaltern remarked.

And a major had this comment: "We all know that the Army is his prime concern, and that he'll press for its best interests without fear or favour."

What of the human being behind the gongs and red gorgets? He was born in Salisbury, in the old "paper house" nursing home. His father was Lt Col R. W. (Reg) Walls, who had originally been a member of the Royal Naval Air Service, and fought in the First World War.

In 1920, he came out to Rhodesia to join the BSA Police, and when a portion of that force was hived off to start what became the Permanent Staff Corps (the embryo of what is our Army today) Reg Walls was one of that company.

At one stage Commanding Officer of the RAR, he was also acting Chief of Staff from time to time. (Happily, he lived to see his son Peter become Chief of Staff of the Rhodesian Army in September 1968 — he died in April 1969.)

Both Peter Walls and his younger brother Bill were educated at Plumtree. After being awarded his Higher School Certificate, the young Peter was faced with the choosing of a future career.

Says General Walls now: "I wanted to join the Navy, but Dad pointed out that a sailor had little home life. If I wanted a service career, he said, why didn't I consider the Army?

"I thought this over, and the idea appealed to me, but the Permanent Staff Corps was too small for two of us, so I decided to try for the British Army. After the wartime Selection Board, I stayed on in Britain — by then I was a 2nd lieutenant in the Black Watch and did the Regular Commissions Board, which I passed.

A big blow

"In 1947, I was given by the regiment one of the four vacancies for regular officers in the Black Watch. I believe that granting this to me, a young Rhodesian, was a gesture of thanks for the service so many Rhodesians had given to the Black Watch during the war."

Though the young Lt Walls had at first been posted to Perth, when Highlander training centres amalgamated into the Highland Brigade Training Centre (which dealt with two and a half thousand men) he was appointed assistant adjutant there.

Then came a big blow: numerous surplus infantry officers, recently retired from the Indian Army, had to be absorbed into the British Army. New subalterns such as Lt Walls were told, with regret, that in order to make room for these very experienced infanteers in the infantry, the newcomers would have to go to other arms.

"This crystallised the feeling I had been half-conscious of for some time: that the British Army, and the British way of life, were alien to me. Had I been able to go on in the Black Watch, I might in time have accepted this lifestyle, but when I was faced with the decision of what to do next, I realised I didn't feel at home in Britain. I'm a Rhodesian born and bred — I believe I belong in Southern Africa. So I came back."

Upon his return, he investigated the possibility of a job in commerce or industry — "but I was late to be getting into such spheres. I was perfectly prepared to start at the bottom of the ladder, as long as the prospects were good ... but there didn't seem much on offer at the time.

"Several people pointed out to me that as all my previous training and experience were for an Army career, it would be silly to throw the benefits of those years away.

"Then, just before the end of March, General Garlake sent a message to me through my father, to the effect that there was one vacancy left in the Army; and that also after March 31, 1948, previous service would not count towards one's pension.

"So I joined — as a corporal, the rank at which all newcomers then had to begin. I duly sat the firstever corporal to sergeant examination. I well remember it, because I fluked first in order of merit."

1949 saw Sgt Walls hoping for promotion to colour sergeant. Instead, he was thunderstruck to be told that he had been chosen as one in a group of seven to be commissioned — five of whom were middle-aged WOs or senior NCOs, with years of service behind them. The other youngster was Donald Campbell-Morrison.

Training wing

Prior to his commissioning, the then Sgt Walls had been on the staff of the Southern Rhodesia Training School. As a new lieutenant, he was posted to the RAR, and soon told to run a training wing, together with one Ben Harding (later captain quartermaster), and a Corporal Nkatazo Tumbare — who is now one of the RAR's two regimental sergeant-majors.

General Walls and RSM Tumbare have kept up their friendship ever since those days, and often get together at Army parties to reminisce over old times.

General Walls recalls that one of the most fascinating experiences at this stage of his career was his time in Somaliland.

"I got detached to 4 KAR in East Africa, to help with the evacuation of Somaliland when it was handed over to Italy. The CO sent me as officer in charge escorting a big convoy going up through Italian Somaliland to British Somaliland.

T was particularly interesting work because in the course of the return journey, we had to mount an attack on Shifta (brigands) in the area. They'd attacked a small guard on some wells, and taken them captive."

A party of Italians in a jeep warned the platoon of 16 to run for their lives, but the men were highly delighted to have a chance of getting to grips with the notorious Shifta. The attack was highly successful, and both prisoners and wells were freed.

During his stint in East Africa, the young Lt Walls, a crack shot, was nominated to shoot for the pot each day while his unit was on the move.

He says wryly: "There was this assumption that G. P. Walls would provide the meat... but pride goes before a fall. It was mortifying in the extreme when occasionally I had to report that there was no fresh meat for dinner that night! That brought me firmly back to earth." He had not long been back with the RAR when the Southern Rhodesia Far East Volunteer Unit was mooted. Sir Godfrey Huggins, as he was then, had offered a token force of 100 Rhodesians to go to Korea.

The British Government recorded their gratitude, but said they would prefer to use the force as a squadron in the Malayan Scouts (Special Air Service) Regiment in Malaya.

Lt Walls was instructed to raise and train the unit with the help of Lt Donald Campbell-Morrison; and was told that a permanent OC would later be appointed. He himself was promoted to temporary captain.

It was accepted that a British Army officer, probably a major with extensive wartime experience, would subsequently take over, but in fact this never happened. A month after the unit had arrived in Malaya, Captain Walls was told that he had been raised to the rank of temporary major, and appointed squadron commander. He was only 24.

Did he have inner quakings about taking over such a responsible job at a very young age?

E thinks back, then says: "I was certainly overawed at the challenge, and at the fact that the other chaps equivalent in rank to me there had rows of ribbons, and years of experience behind them.

"But I did have supreme confidence in the belief that my Rhodesians were potentially better than anyone else. By and large, they're used to being leaders, from an early age — and counterinsurgency depends greatly upon leadership, right down to the quality of leadership of a two-man patrol.

"There was also the point that at this time, counter-insurgency was a brand-new type of operation, and in that respect we all started out on an equal footing regardless of age and previous experience.

"But my couple of years in Malaya did change me, and I quote my old friend Andy Rawlins (now Maj Genl G. A. D. Rawlins) who said of me when I got back: "I can't believe you're the same chap. In just two years, you've grown years older in wisdom and maturity".

General Walls refused to talk about his Malayan experiences. "It all happened a quarter of a century ago, and I don't believe people want to hear about it now," he says firmly.

I disagree, however; I think that this period is of intense interest to Rhodesians in the light of the similar war we are today fighting against terrorists. The general's service in Malaya is also of historical note, militarily speaking, in that his unit, the Rhodesian Squadron Malayan Scouts (Special Air Service) marked the beginning of the SAS that is today such a vital part of the Rhodesian Army.

That first SAS unit fought superbly — Lt Col Michael Calvert ("Mad Mike" of Major Wingate's wartime Chindits in Burma) commented: "I have seen these Rhodesians at work, and am very much struck by them."

Their commander, the then Major Walls, was awarded the MBE for his work in Malaya, but he says: "It was definitely in recognition of the entire squadron's efforts."

N 1972 I interviewed General Walls for a series of articles on the counter-insurgency campaign in Malaya, entitled "The Forgotten War", and published in *Illustrated Life Rhodesia*. I now quote sections from that interview:

"When we arrived in Singapore, we went straight up to Dusun Tua, about 16 miles out in the jungle from Kuala Lumpur, for our training. This consisted of jungle navigation, patrolling, practice in firing at point-blank range; using one's nose and ears much more than one normally does in urban life.

"During those years in Malaya, I think all of us found our senses becoming considerably sharpened. This reduces somewhat as time goes by, but to a certain extent, one never really loses it.

Outstanding memories

"My outstanding memories? ... Approaching a suspected terrorist camp on a training op only to find three pythons one after another crossing our trail, and the British Army sergeant who was instructing us, firing several shots at each of them without achieving anything.

"Then one of the patrol, Franz Louwrens, moving forward, and with one stroke of his machete neatly despatching each of the pythons — and offering quietly to do the same to the sergeant, who had given away our presence to this camp, which we had been trying to stalk stealthily.

"... The time when we were trying to cross a swollen river on a raft, and were being fired upon from the other side by terrorists on a high bank. The three of us took off from the raft and dived under the water.

The Commander of the Army takes this opportunity of expressing his gratitude to those business houses who, through force of circumstances, found they were unable to advertise in this publication, but who have made generous donations to The Army Welfare Fund in lieu. "While all this was going on, Trooper 'Father' O'Linn grabbed my hat as it floated downstream, and returned it to me later with a grave: 'You dropped your hat, sir.'

"Of course, we had to swim back to the other bank and stay there overnight. Then I remember lying awake all night, shivering with fear and apprehension, trying to work out how I could reasonably order someone else to lead the way on the second attempt to cross the river the next morning. In the event, we crossed without opposition — the terrorists had gone.

"As we were leaving the Belum Valley, four of us were ambushed only 70 yards after leaving D Squadron base. Two terrorists fired upon us from a high bank. They must have been lying up watching the base camp.

"Although, in effect, we were not properly alert, only just having left the base, when we charged up the bank at them, they took fright and scarpered."

General Walls took part in the first experiments ever of parachuting into the tall trees of primary jungle, and thus opened the way for a whole new operational technique.

HE recalled in 'The Forgotten War': "I remember vividly crashing down after one jump, when my parachute had stuck on a huge branch which looked safe – but as I prepared to abseil down, it broke and then fell on top of me. Luckily a kink in its shape fitted over me, so I wasn't injured.

"On the next jump, I landed on what appeared to be an extremely flimsy branch 130 ft up. I remember abseiling down saying 'Please God please God' all the way. In fact, seven Rhodesians tugging on the rope and rigging lines, couldn't move the parachute, or break the branch.

"During the final experimental jump into jungle, we simulated a rescue team parachuting into the spot where a plane had ostensibly crashed — to prove that the technique had possibilities other than those of a purely military aspect.

"After we had cut a landing zone, we called in a helicopter to evacuate the imaginary casualties from the 'air crash.' Just as the helicopter came in, it turned over on its side and shot 25 yards horizontally across the clearing, to crash. I was hit in the face, neck and chest by some little pellets.

"Subsequently, the experts maintained that these couldn't possibly have come from the helicopter. Either they were wrong and the pellets were, in fact, fragmented pieces — or a terrorist had crept up with a shotgun and home made ammunition and, taking advantage of the situation, let fly.

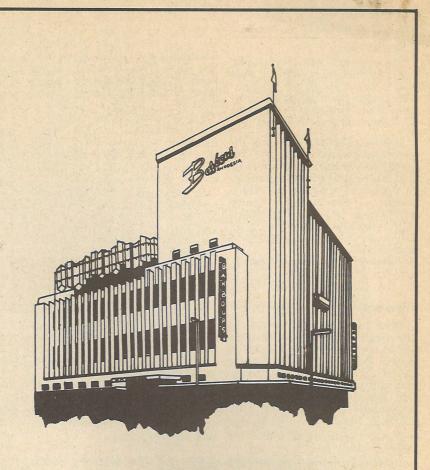

"Subsequently, we took part in a large op, in which 50 parachutists were dropped into the jungle and marshes in the Bukit Yong area. No casualties were incurred, and two terrorists were killed. This was the first occasion since the Second World War in which troops were BARBOURS - in Rhodesia for over fifty years and proud of their association with its history and development.

Barbours Mansworld combine knowledge of international markets with traditional ideals of quality and service to satisfy even the most fastidious of Rhodesian men be they conservatively correct or youthfully elegant.

The Commander of the Rhodesian Army

Left: Off duty: General Walls has an informal chat with RSM K. Tumbare, DMM, a friend of long standing.

> Right: Two men at the top: General Walls, the Rhodesian Army Commander, and Air Marshal M. J. McLaren, Commander of the Rhodesian Air Force, make a joint visit to the operational area.

deployed on operations by parachute into primary jungle.

"The strain told on most of us after a while. In the third month of an op, chaps who'd been the best of friends, got to the stage of begging for transfers to different troops, since they felt that if they bivvied together any longer, they'd slit one another's throats.

"I remember the last patrol of the last op before we were due to return home to Rhodesia ... and our finding fresh cuttings. I looked at Bruce Campling (now Col A. B. Campling) wondering if he would give me away if I pretended not to have seen these cuttings.

"Of course, we followed them up, but luckily they turned out to be of no consequence. Had they led to anything, we would have had to postpone our departure for some while.

"My proudest moment? Moving down the Slim River, having been warned by radio that the terrorists knew that we were going out on that route and were waiting for us.

Military machine

"The way the men moved reflected their degree of training, teamwork, and state of preparedness. I felt part of a highly alert and skilled military machine.

"Then there was the time when we were moving as an entire squadron, and a small group of terrorists came upon us obliquely from our rear. We heard and saw them before they spotted us,... and there were 90 of us as opposed to four of them.

"The one we shot was an especially valuable catch — he was bodyguard to the local commander, and when he was killed, he had some of his boss's documents on him, which were a great help to us.

"Malaya was a valuable experience, in that we learnt the elementary principles of counterinsurgency warfare. General Put-

terill (then a major) had also been up to Kenya to study the anti-Mau-Mau campaign; and when we got back from Malaya, we held a series of rural training camps, adapting all we had jointly learnt to local conditions.

MAN AT THE

"How well our methods were adapted and improved upon has been illustrated by the successes of our young soldiers in recent years."

Upon his return to Rhodesia in 1953, he was posted to the RAR as OC, A Company. From there, he went back to Training School, initially as an instructor, first in the basic training wing, then in the tactical wing; but he subsequently rose to chief instructor.

There followed a spell in the Northern Rhodesia Regiment as company commander of D Company, at Tug Argan Barracks, Ndola. His next appointment was that of GSO 2 Training, at Army Headquarters, Salisbury; and then he was sent to Staff College in Camberley, England.

WO Rhodesian officers per year were selected for the Staff College course, and the other student in 1960 was a young Major Rawlins — now Maj Genl G. A. D. Rawlins, the outgoing Chief of Staff of the Rhodesian Army.

General Walls says that to him the most absorbing facet of that year at Camberley was the opportunity it afforded of meeting members of other Commonwealth — and foreign — armies.

"We taught each other a lot, pooling our knowledge, especially as regards counter-insurgency methods. This was to stand us Rhodesians in good stead for the 1960s and 70s in our home country."

He was posted back to the NRR as second in command in 1961, just in time for what he terms the "sabre-rattling exercise" of Sir Roy Welensky's during his confrontation with the British Government.

"I was moved to Lusaka to be

brigade major to Brigadier Grigg at this point, but I later returned to the NRR. Then HQ Copperbelt Area was formed, and I was appointed brigade major."

Upon his promotion to lieutenant colonel in 1962, he became adjutant general at Army HQ.

"I was there through the ghastly time of the dissolution of Federation. There were numerous personnel and administrative problems to be sorted out, and all of them complicated by the fact that no sooner did one have a working party decision to act upon, than it would be countermanded, within a matter of hours."

Great challenge

Out of the wreckage, though, the Rhodesian Army evolved. One of the many changes deemed necessary for the moulding of this new Army was the reorganisation of the 1st Battalion The Rhodesian Light Infantry, and the instituting of commandos in that regiment.

To his delight, the then Lt Col Walls was appointed CO of the regiment.

He says now: "I looked upon it as a great challenge: to take a battalion in which the morale at that time was not all that high and a battalion about which there had been much criticism — and begin building it up.

"The important thing was to make the men feel that they were the elite, the pride of Rhodesia. I believe we succeeded in doing this, but I must stress that we could never have achieved it without the wonderful team I had there."

The RLI's new role had come into being at precisely the right time: within months of the creation of the commandos, the first terrorist at rocities and incursions began, and the regiment had a chance to show its teeth. The resultant prowess of its men was a source of great pride to the CO.

In 1967, he was posted to Army HQ as GSO 1 (General Staff Of-

ficer, Grade 1), but in the November he took command of 2 Brigade. Operation Cauldron, the biggest anti-terrorist endeavour at that stage seen in Rhodesia, broke in early 1968, and was followed in quick succession by more minor operations, such as Excess and Griffin.

"It was the best experience in my career," General Walls comments. "An exhilarating, exciting period. Again, I was lucky to have an excellent team — headed by Brigade Major A. N. O. (Derry) MacIntyre (now Brigadier-Designate MacIntyre), and for this reason, I was able to spend a lot of time in the field.

"I don't believe you can command an op successfully, unless your presence is constantly felt; but the only way a brigade commander can achieve this is through the support of an intelligent and efficient staff and first-rate communications.

B ECAUSE I was in perpetual touch with all relevant HQs and units, I was able often to stay with a commando headquarters or company headquarters overnight.

"But mostly it was a case of flying round the operational area in company with senior Police and Air Force officers — and I think the fact that we were seen together so much was also important.

"We did of course have Joint Operational Centres, at which each branch of the security forces was represented; but the sight of the upper echelons travelling around together had added impact.

"We were dubbed the Three Musketeers — though someone later altered this to the Three Must Get Beers."

General Walls was appointed chief of staff in September, 1968, at just 42. Initially he remained "a sort of souped-up brigadier with a special rate of pay — but later they regularised this and made the chief of staff up to major general, and the general officer commanding (nowadays known as the Army

THE MAN AT THE TOP

Commander) to lieutenant general."

He began taking over as GOC in July 1972, when General Coster, the outgoing GOC, embarked on his farewell tours of all the units in the Rhodesian Army.

In the August of that year, Lt Genl G. P. Walls was officially appointed General Officer Commanding the Rhodesian Army. Operation Hurricane, which is still being waged at the time of writing, began in December 1972.

"It's been a great honour to have been at the head of the Army during the period in which it has been involved in the country's biggest military operation," he says.

Taxing job

"Being Army Commander is a pretty taxing job, but to have a challenge of this magnitude to tackle, makes it very worthwhile. I'll look back at the end of my tour of duty next year and be glad I had this job at this particular time when the Army was really earning its keep, so to speak."

Does he enjoy the job?

"Yes," he says frankly; "I like being able to follow my own instincts, and command, rather than being inhibited by working for someone else. It was never consciously in my mind to get to the top, though.

"However, if you join the Army (or any other business) surely your ambition is to command at one level or another; and this was always my aim.

"Back in 1949, I hoped for nothing more than to get colour sergeant — and then to my utter surprise, found myself an officer again."

Since he took over as Army head, General Walls' speeches have been markedly outspoken, a far cry from the string of careful platitudes so often the content matter of a highranking officer's public address.

Detailed notes

Rhodesians have come to await his speeches with great interest as a result, knowing that invariably each will be forceful, hard-hitting where this is deserved, and candid.

He normally makes detailed notes beforehand, but so remarkable is his memory (as his officers in Army HQ will testify, sometimes ruefully) that he's able to speak virtually without referring to the paper in his hand.

He's been criticised by certain foreign newspapers for what they term the "political" subject matter of his speeches. An Army Commander, they maintain, should keep out of "politics".

I asked him for his comments on this, and he replied: "I have never made a 'political' speech. However, in modern-day African affairs, the political and military scenes overlap so much and psychological action is so important a part of the military effort that a commander is bound to get involved to a limited extent in politics.

"My warnings of the psychological wedge about to be driven between South Africa and Rhodesia, and about Rhodesia never having been in a more serious position, reflected my concern as a military commander.

"A subsequent speech in which I

tried to sum up the detente picture at that time from the point of view of a simple soldier was a deliberate and carefully thought out contribution which I am satisfied had the desired effect.

"It played some part in motivating various political moves which resulted in steps being taken against our terrorists in countries to the north of us.

"Rightly or wrongly, therefore, I believe that my speech helped score a significant military victory without the loss of a single one of my soldiers — and at the same time did Rhodesia no harm politically."

In private life, General Walls is a proud and devoted father, and one who has always involved himself closely with the upbringing of his family.

(When his son was a baby of three months, Mrs Walls had to go into hospital for a short while. Father took over without a murmur, changing the nappies and administering the bottles from 4.30 pm each afternoon onwards, and running a training course for officers during the day, with the assistance of one sergeant.)

Sporting arena

His four children have shone both academically and in the sporting arena, and it has to be a very important military commitment indeed that keeps the general away from the rugby field when George is playing for the Midlands under 20s; or from a ringside seat at a swimming pool where Valerie is about to break a new record.

George is 21, and has just completed his National Service. He has the Walls sense of humour in full measure, and so was well able to cope with all the ribbing about Dad during his Army stint. He's played for Rhodesia in the under-19 water polo team, and in the Rhodesian B team.

MARY, aged 19, was head girl of Oriel Girls' School, and also did well at sport. After completing a year's course at the Cape Technical College for Advanced Education, she returned to Rhodesia and now has a post in the Ministry of Foreign Affairs.

Paddy, 18, excelled herself by earning four distinctions at M level, and has represented her school at hockey. She is now engrossed in a banking career.

At 16, Valerie is the baby of the family, but in the realm of sport, she's notched up some very adult achievements. She's swum in two tests for Rhodesia against South Africa, and won the South African 200 metres women's free style title at the South African Championships. On various occasions, she's held Rhodesian records.

Their father has always been a keen sportsman himself. He won colours for rugby, athletics and water polo at Plumtree, and played for Scottish Services at rugby during his Black Watch days.

His Army commitments abroad, however, restricted his sporting activities as a young man. Nowadays his favourite pastime is social tennis, and full support of rugby, boxing and water polo.

Christmas visit

As previously mentioned, he did his parachute training in Malaya, but then because of career commitments, had to let it lapse until, as he says, "I was talked into doing a jump by the RLI Free Fall Club, in 1967. I succeeded in bending a parade ground lamp shade with my canopy!"

S INCE then, the general has kept up his parachuting, and on Christmas Day in 1973, he parachuted into Mozambique to visit troops in a remote spot.

(His Christmas visits have become a regular event; he never spends the festive season at home, but tours around the operational area, "hitching lifts in helicopters" and visiting every possible unit, so that the boys stuck on the border at a time when they especially long to be with their families, know that the Very Top Brass is appreciating their efforts.)

Recently he parachuted with the SAS into Gatooma for the Cotton Festival, making a perfect landing at the Showgrounds.

There's the idea in some quarters that an Army Commander is a Delphic Oracle on a lofty pinnacle, seldom seen, sometimes heard, but regarded with the utmost awe, whereas the Chief of Staff, as high priest, is the man of action.

General Walls disagrees with this concept. When he took over as Army Commander, he was determined to continue keeping in close personal contact with his men, wherever they were.

He's no remote figurehead, reserved only for dealings with the cabinet, but is still deeply involved with the day to day machinery of the Army he loves so well.

When one of his daughters was a little girl at primary school, she had to produce an essay on her father. She wrote: "My Dad can't even keep a job; he keeps getting moved from place to place."

Rhodesia has cause to be grateful for those moves, which served to put the right man in the right job at, in the national context, a crucial time. \bullet

Supplement to ILLUSTRATED LIFE RHODESIA, 7th August, 1975

Right: The magnificent few: centre, seated, is Capt F. C. Selous, the Pioneer Corps' intelligence officer. On his left is Maj Frank Johnson, officer commanding, and who was responsible for the recruiting of the 200.

Within the space of 85 years, the Rhodesian Army has undergone many changes, but the spirit of courage and perseverance has remained, and lives on

THE beginnings of the Rhodesian Army in truth go back to October 29, 1889 — for on that day, Royal Charter was granted by Queen Victoria, sanctifying the Matabeleland ventures of Cecil John Rhodes.

These activities were to be administered by Rhodes' newly formed British South Africa Company.

A section of the Charter authorised the BSA Company to raise a police force for the maintenance of law and order in any territories it might subsequently control.

Exclusive charge

Initially, however, it was thought that the assistance of the Bechuanaland Border Police would suffice, should trouble arise with the tricky-tempered Matabele King, Lobengula, who had given Rhodes "exclusive charge over all metals and minerals" in his kingdom in exchange for 1000 Martini-Henry rifles, 100 000 cartridges, and £100 a month.

Rhodes in fact intended to occupy the Mashonaland area of Lobengula's realm, as part of his plan to extend British influence throughout Africa, from Cape Town to Cairo.

He had been told that a minimum

of 2 500 men was necessary if such an occupation was to succeed, and this agitated him greatly, since the cost of a force of this size would consume most of the company's capital at one fell swoop.

One December morning, deep in depression, he was breakfasting at the Kimberley Club. To the astonishment of his table companion, a 23-year-old by the name of Frank Johnson, he suddenly launched into a lengthy and impassioned dissertation about his Mashonaland scheme, bemoaning the fact that 2 500 men seemed to be required in order to implement it.

Johnson said casually that, in his opinion, 250 men would be ample for such a task. Now alight with enthusiasm, Rhodes asked him to draw up an estimate of what such a force would cost.

Johnson sat down and complied — and came up with the figure of $\pounds 87500$. Rhodes thereupon offered him the job of organising the Pioneer Column.

In recruiting his Pioneer Corps, Johnson attempted to select a comprehensive cross-section that would prove a sound foundation for the new community, and ensured that every type of tradesman and artisan was represented: a sort of human Noah's Ark.

The High Commissioner in Cape Town directed that the corps should be accompanied by a military force to protect it and maintain communications with the south. This force would also preserve law and order after occupation.

The official birth of Fort Salisbury included the hoisting of the Union Jack — by Lt E. G. Tyndale-Biscoe, on a hastily-made msasa pole — the offering of prayers, three cheers for the Queen and for the Prime Minister, Lord Salisbury, and the firing of a salute from the two field guns which had been dragged all the way from Mafeking.

Wet season

The Pioneers were discharged on September 30 and began building their town. Within three months the fort had been completed, and two rows of pole-and-dagga huts had been erected.

That first year in Rhodesia was a grim one: the wet season was excessively heavy and all the major rivers flooded. This virtually severed communications with the south.

Food and medical supplies were drastically short, and for five bleak months the Pioneers existed on pumpkin, rice, boiled split peas and dry ships' biscuits. Malaria, and its deadly consequence, blackwater fever, were rife, and burials became a relatively commonplace occurrence. In 1891 a volunteer force was raised named the Mashonaland Horse and consisting of 500 men, of whom 200 were mounted.

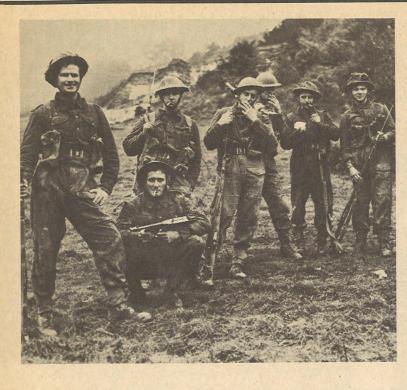

This was to be absorbed into the Salisbury Horse in the Matabele War of 1893 — which broke out after repeated and violent raids over the Mashonaland border by Lobengula's impis.

Dr Jameson eventually summoned the indunas to an indaba, and told them that if they were not over the border by sundown, he would be forced to chase them out.

When this command was disobeyed by a particularly belligerent detachment, who dallied to sack a kraal, a skirmish with a white patrol ensued, and Jameson decided that the time had come to annexe Matabeleland.

700 mounted volunteers crossed into Lobengula's territory, and were joined on the southern front by members of the Bechuanaland Border Police. The Matabele were soundly thrashed in two consecutive battles, one at the Shangani River, and one at Imbembesi; and Dr Jameson's Column entered Lobengula's smoking and deserted kraal of Gubulawayo on November 4, 1893.

In view of the size of Rhodesia's white population, it is of note that three Victoria Crosses, Britain's highest military award for bravery, were won between 1893 and 1897.

Left: Rhodesians from Salisbury and District take a breather after a run over a battle practice course somewhere in Britain. By 1944, 2 313 Rhodesians were on active service outside the country. Below: 1 RAR returns to Rhodesia. It was a triumphal homecoming: the battalion had acquitted itself with great honour at the battle of Tanlwe Chaung in Burma, on April 26th, 1945.

Rhodesians Worldwide

There was stalwart support, too, from many Africans for the white cause: among the tribes that supported the settlers were those of the Victoria district; Gambo's Matabele; and the people of Umtasa, who was the most powerful chief in Manicaland.

1896 had marked the reorganisation of the police: the Mashonaland Mounted Police and the Matabeleland Mounted Police amalgamated in effect to become the British South Africa Police.

Influx of immigrants

But with an influx of immigrants towards the end of the 19th century, it became obvious that the police strength was inadequate, and in 1898 the Southern Rhodesia Volunteers came into being.

During the Anglo-Boer War (1899-1902) the British South Africa Police and the Southern Rhodesia Volunteers served with a column which had advanced from Bulawayo to help in the relief of Mafeking; and which included a new unit raised specifically, and named the Rhodesia Regiment. It played a sterling part indeed in the relief of Mafeking.

The British moved into Mafeking on May 17, 1900, by which time the town had been invested for seven months. In his report, Baden-Powell commented: "The whole operation of the two relief columns was exceedingly well conceived and carried out."

Within those columns, Rhodesians had indeed served their Queen well.

As a gesture of appreciation, on October 5, 1904, the King's Colours were presented to the British South Africa Police and to the Southern Rhodesia Volunteers at Mafeking, by Lord Milner. The following year, the people of Bulawayo presented a regimental colour to the Southern Rhodesia Volunteers.

The 1st and 2nd Rhodesia Regiments were raised respectively on September 13th and 21st, 1914 (the original Rhodesia Regiment having been disbanded in late 1900); and with the Rhodesia Native Regiment and the BSA Police, fought gallantly against the Germans in South West and East Africa, and in France.

After only 17 months of the First World War, no less than 64 per cent of Rhodesia's available manpower was on active service outside the country.

The battle honour of the Rhodesia Native Regiment was "East Africa 1916-18" — and was later transferred to 1 RAR. The Rhodesia Regiments were given the following battle honours for their service: "Great War 1914-18"; "South West Africa 1914-15" and "Kiliminjaro, Beho Beho and East Africa 1915-17." In 1920 the Southern Rhodesia Volunteers were disbanded, but rifle companies were retained in each of Rhodesia's main towns. A Defence Act promulgated in 1926 (and coming into effect in January, 1927) made provision for a Permanent Force and a Territorial Force.

Outbreak of war

The HQ instructional and administrative staff for the Defence Force was the embryo of the Permanent Staff Corps.

The late 1920s and 1930s witnessed various developments as regards the Rhodesia Regiment, but little was done to enlarge the Permanent Staff Corps at this time; when it was increased in 1939, it totalled 47 - 22 officers and 25 other ranks.

The outbreak of the Second World War precipitated the separation of the military forces from the police, and the introduction of fulltime conscription.

The full-time units formed were the Southern Rhodesia Reconnaissance Unit (later to become an Armoured Car Regiment), the Light Battery (subsequently affiliated to the Royal Regiment of Artillery), the Southern Rhodesia Medical Corps and the Signal Company. Later, the 1st Battalion The Rhodesia African Rifles, and the Women's Auxiliary Territorial Services, were raised.

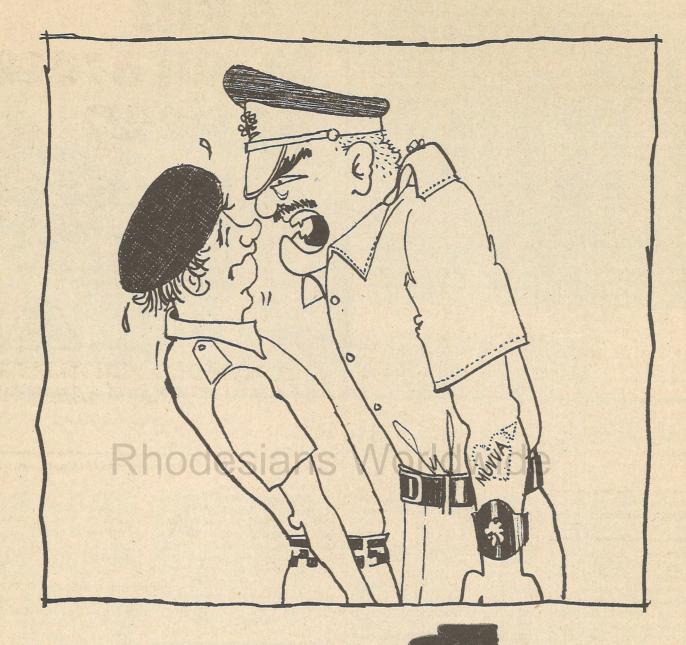

In 1941 the Southern Rhodesia Supply Corps was formed, a Coloured Motor Transport Depot opened, a Leader Training School established in Gwelo, and an Armoured Fighting Vehicle School in Umtali set up. Towards the end of 1941, the Southern Rhodesia Military and Air Force Police was formed.

1942 saw the inception of the Southern Rhodesia Works Company of Engineers — in 1944 the Southern Rhodesia Electrical and Mechanical Engineers was formed.

By 1944, 2 313 Rhodesians were on active service outside the country; 4 568 served within its borders. Rhodesia supplied more troops per head of its population to the British war effort than did any other country in the Empire.

Peace saw many changes, the chief being the transition of the Southern Rhodesia Permanent Staff Corps to the Southern Rhodesia Staff Corps. Defence HQ moved to King George VI Barracks.

Within the space of 85 years, the Rhodesian Army has undergone many changes, but the spirit of courage and perseverance has remained, and lives on. ●

Avoid them with a NUGGET shine.

Leo Burnett 3758

E ARMY MUSE

NY institution that has pride in its achievements gives thought to preserving tokens of these for posterity; and thus it was that the Rhodesian Army began its Military Museum - initially as a smallish collection housed at the School of Infantry, but now an impressive entity in its own building (part of the Midlands Museum, Gwelo) and containing a comprehensive array of military memorabilia.

No one can quite remember when the concept of such a museum was first mooted, but most are agreed upon the fact that the first person to make the suggestion was Maj Gen G. A. D. (Andy) Rawlins - who has an abiding interest in military traditions and insignia.

When he was commandant of the School of Infantry in Gwelo, in the early 1960s, Genl Rawlins - a lieutenant colonel then - voiced the opinion that the Rhodesian Army should start its own museum.

T BEGAN, in the main, as a point of interest for instructors at the school, but enthusiasm gathered force, and a goodly number of weapons - chiefly illustrating the gamut of small arms - were soon collected.

Maj R. J. (Bob) Davie - now recognised as an expert in this field was appointed museum officer in November, 1966.

Weapons collection

He recalls that Lt Col Leon Jacobs (then a captain) started to form the nucleus of an excellent weapons collection when he was serving in Regimental Wing. This collection was housed in Regimental Wing. In 1964, Genl Rawlins convened a meeting to discuss the formation of a proper, small arms museum. This museum was set up in what is now the reference library

Hemsley and WO2 W01 Fitzgerald did sterling work preparing the weapons for display. Unfortunately, this small, but excellent museum was closed down within a few years — "the weapons being kept in the armoury in the quartermaster's store", says Maj Davie.

"Early in 1967 I re-opened the museum in what is now part of HQ Group — it had been an old vehicle workshop — and had a great deal of assistance from PWD at that time.

"Mr Whincup, the carpenter at the School of Infantry has been immensely helpful throughout. Sgt Maj Blackshaw, who was an armourer sergeant then, also helped a great deal.

"I began scrounging all kinds of military exhibits; not only weapons, but documents, maps, photographs ... I wrote letters to

every district and provincial commissioner, and to all MOTH clubs and buttonholed each visitor to the School of Infantry.

"It began to snowball into what has eventually become a fairly large collection, in our context.

"Retired colonels would send us cardboard boxes full of donations: we had a lot of help internally too, from Army HQ and Services Corps, in that whenever a weapon went out of date, they'd send us a sample the same with badges and uniforms.

I have browsed through this most fascinating museum, its contents ranging from faded letters penned in the thick of the Matabele and Mashona Rebellions, to captured (and bloodstained) contemporary terrorist weapons and uniforms.

Loving care

What are the highlights, though, for the man who built it all up with such loving and meticulous care?

Maj Davie has to think about this one. Clearly, like a parent with a lot of children, each has a special place in his affections.

But he eventually names as his especial favourites, a Maxim gun -"presented to the museum by a police inspector who collected weapons; and the rifle belonging to an Arab slave trader who operated between British and French Somaliland before and after the First World War. He (the trader) was finally defeated in 1920; and the rifle came to us from 1 KAR.

"As regards the documents. I particularly like the map of Russia drawn on a sheet by a German prisoner of war."

R HODESIAN involvement in the Malayan anti-terrorist campaign is well represented, mainly through donations from Genl Rawlins and Col Parker.

Today, Bob Davie, (though still the Army Museum officer) is rather like a father who has handed his family over for adoption, but still enjoys seeing them as often as possible and doing what he can materially to help.

Mr W. S. Rees, keeper of the Midlands Museum, is the official guardian of the Army Museum nowadays - "and a great asset to the Midlands Museum as a whole,' says Maj Davie.

The RAR and RLI each have their own excellent regimental museum collections, of particular interest to people currently or formerly belonging to or connected with those regiments.

But if you want an all-round view, impeccably presented, of Rhodesian military history, go to Gwelo, and the Army Museum it's well worth the trip.

Akiss to put a rose to sleep

And sleep is a must for your roses.

Spray them with RFC Lime Sulphur.

It weaves an invisible net of winter protection, at the same time killing off insect and fungus.

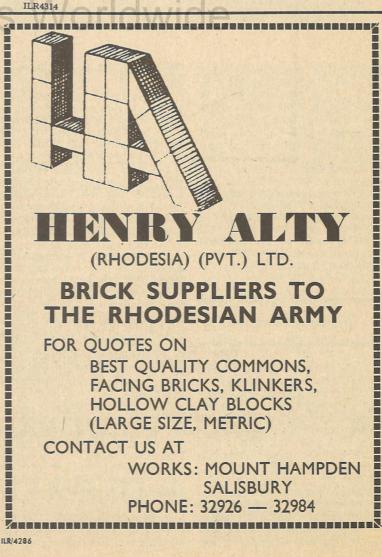

Vile smelling, but essential, Lime Sulphur induces dormancy, and, because it kills insects and fungi, ensures you get no problem carry-over from season to season.

Spray immedaitely after pruning for healthier rose bushes.

The Rhodesian African Rifles

> Right: The RAR have a long tradition of jungle warfare; they fought with distinction in the dense jungles and tangled waterways of Burma during the Second World War, and in Malaya during the 1950s. The veterans who returned passed on valuable know-how to the battalion.

AN ELITE GROUP OF FIGHT

"This is a regiment above faction, tribe or politics, to whom the country owes an incalculable debt for their dedication and bravery." — Lt Genl Walls, speaking about the men of the Rhodesian African Rifles

HERE'S something special about the RAR. I should know - I was privileged to be an RAR wife for eight months, and it was an unforgettable experience.

The RAR men don't talk much about their achievements, but their record is a proud one indeed, stretching from the routing of the Japanese at Tanlwe Chaung (described by the divisional commander then as a "fine action ... the result will bring a real victory in the battle of Taungup") to the battle of Taungup") to the battle of Taungup") to the battle of activities in the present anti-terrorist war, resulting in 1 RAR notching up 400 terrorist eliminations since 1966.

Terrorist hierarchy

In the past eight months, the battalion has been moved five times on all but one occasion after clearing up completely the terroristinfested area they were allotted to tackle. In one district, two contacts were all it took for 1 RAR to wipe out almost the whole of the local terrorist hierarchy.

Speaking at the unveiling of a plaque on the site of the regiment's first barracks on the Borrowdale Road, Salisbury, Lt Gen G. P. Walls, the Army Commander, commented on the fact that the regiment had figured prominently in operational awards.

For instance, it contains a Member of the Order of the Legion of Merit, six holders of the Bronze Cross of Rhodesia, and five Defence Medals for Meritorious Service, among others.

The RAR story really begins in 1939, although a Rhodesian Native Regiment had been raised during World War I, and had fought with distinction against von Lettow-Vorbeck in German East Africa.

But that was supposed to be the war to end all wars; and peacetime accordingly saw the regiment being disbanded. A platoon of askaris was assimilated into the BSA Police.

But with the outbreak of hostilities once again between Germany and Britain in 1939, it was realised that the resurrection of an African regiment in Rhodesia would be an important contribution to the war effort.

(Just how important it would prove to be, five years later in Burma, few could have guessed on that day in June 1940, when the regiment was raised — its first African non-commissioned officers being drawn from the nucleus hitherto contained within the BSAP.)

Its first CO was Major — later Lt Col - F. J. Wane, a First World War veteran, who had retired from the

Native Department, and settled down on his farm in the Umvukwes.

When the concept of the RAR was mooted, he was approached by Defence HQ and offered command of the new African battalion. He accepted, little realising how uphill the ensuing road was going to prove.

Nicknames for officers

But enthusiasm is an unguent when it comes to withstanding hardships; and by mid-July 1941, two full companies had been recruited, and were in training.

It's common practice in the RAR for the soldiers, amongst themselves, to bestow nicknames upon their officers — though always apt, these can sometimes be none too complimentary; but Col Wane's was "Msoro-we-gomo" meaning "the top of the mountain", and indicating the immense respect and admiration he commanded.

• RAR soldiers of that time were a very different proposition to the sophisticated and well-educated men one encounters nowadays when speaking at random to the regiment's troops. Many of that first intake had come straight from remote villages to join the regiment, and were somewhat naive, to say the least. Very few had ever seen any of the trappings of civilization, such as motor vehicles and trains; and so imbued were they with tribal tradition that they were amazed to find that a warrior, feted as he was within the tribal structure, held a rather more mundane position in urban life and was not automatically entitled to other people's livestock, women and whatever other goodies took his fancy.

Once trained, the men of the new regiment hungered for battle; but — partly because of the RAR's valuable function in preserving internal security — it was to be a whole frustrating year before any move out of Rhodesia was made... and that only to collect Italian prisoners-of-war from Durban and escort them to internment camps in Rhodesia.

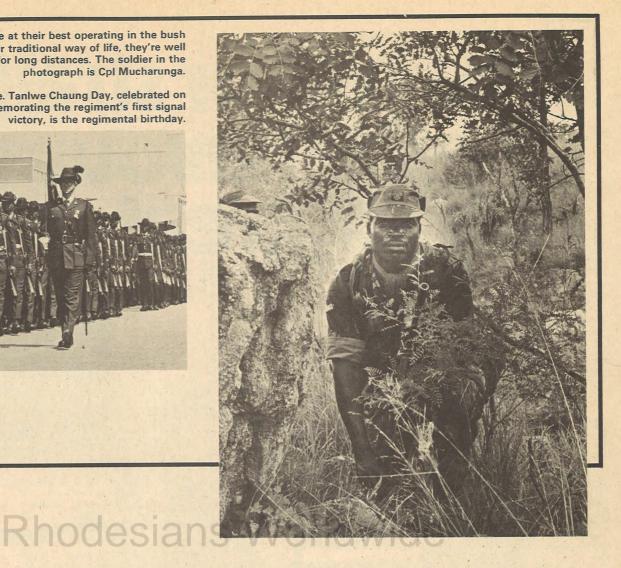

During this expedition, the troops were so impressed by the banana plantations of Natal that they made up the song which was later to be orchestrated and declared the regimental march: *Sweet Bananas*.

In 1943, Brig W. A. Dimoline of the 28th (East African) Independent Infantry Brigade expressed a wish to have the RAR in his command.

When the Governor of Southern Rhodesia, Sir Evelyn Baring, informed the troops of this, he only got as far as "... you are about to leave Southern Rhodesia to fight Right: African troops are at their best operating in the bush veld. Because of their traditional way of life, they're well equipped to walk for long distances. The soldier in the photograph is Cpl Mucharunga.

Below: The RAR on parade. Tanlwe Chaung Day, celebrated on April 26th and commemorating the regiment's first signal victory, is the regimental birthday.

for the King, who needs every loyal citizen to help to win the war ... before wild cheering broke out, and the rest of his speech was totally

drowned in the general and vocal jubilation. The regiment underwent training in East Africa, and on September 5th, 1944, they set sail for Ceylon, enthralled by the ship and the won-

NG MEN

ders of the surrounding sea. After a month's acclimatisation and training in Ceylon, the battalion was deemed ready for service in Burma, and under the command of Lt Col G. W. H. Goode, it set sail again, arriving in Chittagong, Burma, in December 1944.

Its first set-piece action, the major contact at Tanlwe Chaung, was tackled with such distinction that the 26th April, Tanlwe Chaung Day, became the regimental birthday.

Soldier's nightmare

Briefly, the problem that confronted the Allied Forces was the budging of the Japanese from two strategic points in the Arakan. The terrain was a soldier's nightmare: dense tangled vegetation, immensely steep, knife-edged hills riddled with waterways, or "chaungs"

The 22nd Brigade, with the King's African Rifles in the lead, Bergner, bellowing their war cry:

and the Rhodesian African Rifles in the rear, set forth to clear the important Taungup-Prome road.

In just over four days, the East African group covered 40 miles of thickly vegetated jungle, bristling with the enemy, who booby-trapped many of the paths with grenades and mines, and were given to launching "jitter-party" attacks at

night. Upon reaching their destination - the Taungup Chaung - the East Africans found that the Japanese were sitting tight on a number of strategic, rugged hills. It was decided to secure two of these, Bergner and Valerie, by frontal assault,

and this task was given to the RAR. The assault had to be made along a single narrow track, and as soon as 13 platoon, with a section from 4 platoon, moved along this path, the Japanese opened up with a medium machine gun and several light machine guns.

At one point along the track, a large tree had been felled, its branches pointing towards the Rhodesians. The platoon commander, was wounded at this stage by a treetop sniper, but the company commander, Maj Stan Morris, immediately took his place, leading the troops around the tree, and the RAR charged into the fray. After a brisk and deadly exchange, they routed the enemy, and took Valerie. "A" Company, supported from

the air by artillery, stormed up

"Ngadhla-DHZI! Mamo! Ngadhla-DHZI!" They caught the Japanese unprotected on the other side of the

Shooting from the hip, they chased the enemy down the slope, and though the Japanese returned fire briefly, they soon fled towards the valley and river.

Died in action

However, TC Day was not without its sadness for the battalion. Seven men died in action; one officer and 22 African soldiers were wounded. And throughout the night, into the 27th, the Japanese shelling and mortaring was so intensive that four more soldiers were killed, and nine wounded. Altogether the RAR lost 32 men during its Burma campaign. 72 were wounded.

Sgt Maj Josi is the only serving member in the RAR today who was at Tanlwe Chaung. He's a younglooking 49, who joined the regiment in 1942

Nearing retiral age now, this stalwart soldier says that he will be sad to leave the Rhodesian Army, which he has served faithfully for 33 years.

The weapons used by the RAR today are more sophisticated than those employed at Tanlwe Chaung, and the average black soldier is perhaps more articulate and urbane than his counterpart of 30 years back, but otherwise, little has changed in the RAR.

The essential qualities of loyalty, dedication, unfaltering courage and esprit de corps are as strong as ever.

The present CO, Lt Col F. G. D. (David) Heppenstall, MLM, can vouch for this - after a total of 13 years in the regiment, he knows his men well.

Maj E. M. (Eric) Sobey, who has recently embarked upon his third period with the RAR, also remarks upon the good nature of the African soldiers: "Operational work never gets them down. Provided they know they can get back to their kraals every two months or so, they're always cheerful.

"Their chief attribute is extreme willingness to work hard at all times. Their forte is operating in the bush where, because of their natural way of life, difficulties which might hinder a European, don't bother an African soldier.

"Their type of fitness differs from that of a white soldier, probably because of their traditional diet and environment from childhood.

"For instance, although as regards PT, the European is superior, when it comes to walking for long distances, the African soldier ex-

Mixed or straight the flavour's great

18

The Rhodesian African Rifles

Left: In readiness during a patrol. "They're professionals, all of them," says the present CO of 1 RAR, "and their cheerfulness never wavers." The soldier here is Pvt Thomas.

LAN ELITE GROUP____ OF FIGHTING MEN

cels. Thus, they're ideally suited to counter-insurgency work.

"In general, the African soldier looks upon his European OC as his father. Whatever problems he may have will be brought to you — and when, in an operational area, the workload is heavy, this can prove to be an additional burden for the officer to bear.

"But it's a very important part of one's work as an officer in the RAR. One must be ready to be the consoler, the adviser, at all times.

"Now I'm OC HQ Company; this job entails much administrative work, which is very challenging under present circumstances. I have the task of sorting out problems back at camp (Methuen Barracks, Bulawayo) — currently aggravated by the fact that we're in the process of forming 2 RAR, and 230 men are undergoing training, under the supervision of depot training officer, Maj John Templer."

Col Heppenstall told me that the concept of 2 RAR was agreed to some time back. Recruitment has never been a problem with 1 RAR, to put it mildly: the announcement that the battalion is seeking new recruits has inevitably resulted in a horde of hopefuls descending upon Methuen for the selection course.

Rifle company

"Often 100 per cent more than we require," says Col Heppenstall, "and sometimes more than that percentage. I can recall one occasion when we required 100 recruits, and 500 applied."

The first 230 of 2 RAR passed out on June 27th this year and a rifle company will be formed next January. All NCOs in the new battalion will be seasoned soldiers, drawn from 1 RAR.

What do the men themselves think about life in the RAR?

I spoke to CSM Obert, DMM, who told me: "I joined the Army when I was 20 years old, in 1953. My uncle is a soldier, and I knew if I joined the Army, I would be all right.

"I enjoy the work very much, and also it is very good to have everything free — uniforms, rations (our wives, too, get free rations while we are away on active service); medical attention, and schooling for our children.

"The most exciting contact I have been involved in happened during Operation Nickel. It was 5 pm and we were at a base camp. The terrs came to attack us.

Bone shattered

"Two came first, in RAR uniforms. They greeted me in Zulu, then one cocked his rifle. They dived down and fired. I picked up my rifle and fired — then I saw six more terrs approaching ... eventually there were 32 of them.

"The contact lasted an hour. I was wounded in the arm. The bone was shattered, and I was 'casevacced' and spent two months in hospital, then two months convalescing, before I was able to join my company again.

"These terrs are bad men. I have seen tribesmen who have been beaten to death by them. I also saw the woman whose lip they tore off with plters. It is very bad what they are doing to their own people."

Maj T. H. (Terry) Hammond told me later: "In fact, CSM Obert played an outstanding part in that contact." (He was later awarded the DMM.)

Praise too must go to the white members of the RAR: the company commanders, captains and subalterns whose general quality has been recognised by their troops to the extent that the men would follow these leaders into Dante's Inferno itself, to wage war.

And Africans are shrewd judges

SERVICE AND SECURITY

The Standard Bank has provided Rhodesia with sound and secure banking service for over eighty years. Today it is the country's largest organisation of its kind.

OF FIGHTING MEN

of character. Let it be said that the white officers of the RAR are a special breed of men indeed.

Maj Hammond is a prime example. He, like Maj Sobey, has had extensive RAR experience, and has been company commander of "E" Company (the Champion Company emerging from the TC Week sports this year) since September 1973.

He says of the RAR: "It's unique that this is in essence an old colonial regiment, but with loyal African soldiers whose attributes are remarkable. In fighting the terrorists they are, of course, fighting their own kind, and that shows a great deal of dedication to the Rhodesian Army — and bravery.

"Yet once back in the townships, they're able to go out and about, mixing socially with civilian Africans ... this says much for their total impartiality, which of course is the mark of a good soldier. I wonder how many Europeans would shape up as well under similar circumstances.

Obnoxious vermin

The RAR African soldier feels real loathing for the terrorist who is not, to him, a mere enemy, but obnoxious vermin, to be destroyed at all costs.

He has seen innocent African villagers tortured, beaten and bayoneted to death by terrorists, just for the sake of intimidation; he has seen little girls and pregnant women from remote African villages raped and mutilated. He knows that the only way for this bestial violence and slaughter to be eradicated is for the Rhodesian Army to eliminate the entire foul pack.

And thus he is totally dedicated to the cause. Loyalty to white officers has been manifested on countless occasions, but just one instance was the occasion on which an African lance corporal, under heavy fire from terrorists, carried a wounded European policeman to safety.

Placid temperament

Lt Martin Wake says that the average African's placid temperament lends itself well to the endless hours of surveillance, patrolling, or lying in ambush positions, all of which are so intrinsic a part of COIN work.

RSM Stephen Machado, who fought with the RAR in Burma, once wrote in an article: "Since the birth of the regiment... I have done what I could to teach these men of the Rhodesian African Rifles. I have seen the glorious results of that teaching of mine and of the officers of the regiment."

The ultimate paragraph of his article contains the words: "Ishe Komborera Africa" ... God Save Africa.

While there is a regiment such as the RAR, where black and white fight side by side, there is hope indeed for this continent of ours. \bullet

21

The Rhodesian Light Infantry

> Right: Support Group men leap into the fray, rifles at the ready. It takes just one and a half minutes to alert them, from the time the summoning hooter is blown, to the moment that the lorries start moving, taking them to waiting helicopters.

THE INCREDIBLES

The men of the Rhodesian Light Infantry work hard and play hard. To date the regiment's 1 Commando has had the highest number of kills of any sub-unit in the Army

HEY have been called The Saints and The Incredibles; and at their 1975 regimental birthday celebrations, the Army Commander, Lt Genl G. P. Walis, OLM, MBE, said candidly: "Thank God for the RLI."

But I think their true spirit and essential joie de vivre can best be summed up in the words of Commando Commander Maj R. E. H. (Dick) Lockley, who, when I asked him what he would remember about the RLI once he had moved on from that regiment, replied: "The good humour of the men; their cheerful willingness to undertake any task; and their determination and enthusiasm to close with the enemy when contact is imminent."

Charming a crow

The RLI work hard and play hard. Everything is done with dynamism and panache, be it forging into the fray, or, to employ the regimental patois, charming a crow (which means, in case you hadn't guessed, paying court to a young lady).

I was interested to hear what their colleagues in other units had to say about them. Recently two sticks from 2 Independent Company, the Rhodesia Regiment, were attached to 1 Commando, 1 RLI, for a short period. As they were leaving, their OC took 1 Commando's second in command, Lt David Scott-Donelan, aside, and said: "I'd like to thank you and your men for treating us so well.

"I'll admit that when we first heard we'd be joining you, we were apprehensive. But we greatly enjoyed being with you ... in fact, you're a bunch of gentlemen."

And after an RAR company worked with 1 Commando, the RAR company's OC wrote a letter of appreciation to his opposite number in the RLI, saying: "Your men have, without exception, got on extremely well with my soldiers, and have been cheerful, willing and hardworking. It has been a pleasure working with them."

The regiment is a young one, both in history and in current personnel (its CO, Lt Col David Parker, is only 38 and the commando commanders are all in their early thirties.)

In 1961 the 1st Battalion The Rhodesian Light Infantry was formed. But in 1964 after the break-up of Federation, it was reorganised on commando lines, just in time to swing into action a few months later when the first terrorist incursions began. In the 10 years that followed, the regiment has played a leading and brilliant part in all major antiterrorist operations, from Cauldron to Hurricane.

I decided to sample life in the RLI at first-hand, so I attached myself for 24 hours to 1 Commando which has been constantly involved in the present Operation Hurricane — and has had the highest number of kills of any sub-unit in the Rhodesian Army.

Good example

Its commander at the time of writing, Maj Dick Lockley, is a good example of the impeccably trained young officer of high calibre prevalent in the Rhodesian Army today. Born in Bulawayo, and educated at Grey High School, Port Elizabeth, South Africa, he has been in this Army for 15 years.

My day with 1 Commando transpired to be a fairly typical one. This is how it went:

6 am: The guard wakes up those in camp. (Normally, a very small proportion of the commando remains in camp on stand-by and reserve.) There's much yawning and a little groaning, for despite their stand-by circumstances, they've learnt, like most soldiers, to sleep soundly while the opportunity avails itself.

Should there be a call-out during the night, one shout would wake them all, and they would be instantly alert and efficient — but on peaceful evenings, it's a case of heads merely touching pillows before oblivion descends until the dawn of the next day.

As soon as everyone is compos mentis, this minor segment of the commando not immediately on stand-by goes for a mile and a half's run — officers too. (There are no different rules for different people in the RLI).

7 am: They're back in camp, showering and shaving, and then descending upon their breakfast (scrambled egg, bacon, hash, and as much tea or coffee and bread as anyone cares to consume) like a horde of famished locusts laying waste a mealie field.

After breakfast comes muster, and the detailing of general camp duties. A general flurry of tidying up and cleaning ensues.

9 am: Those on stand-by for the day remain in camp, but the others, a much larger proportion, go out for the morning on training. This includes bushcraft such as gamesnaring, and the basics of tracking — though selected members of

Right: All Support Group members are qualified mortarmen. Regular batches are sent to the School of Infantry; these men then return as instructors to tutor the rest of the group.

Rhodesians Worldwide

each RLI commando are regularly sent on special tracking courses.

1 pm: Lunchtime. Today it's roast beef, with masses of mashed potato, vegetables, and all the trimmings.

1.30 pm: For those left behind in camp, a long hot afternoon yawns ahead. Some of the troopies begin a volleyball game; others have a go at the newly acquired swingball set.

Some of the officers and NCOs treat me to a sort of mini-Olympiad, demonstrating RLI games.

One is the Mashonaland Slalom. This entails racing in and out of the poles on the verandah of the camp hut, all the way along to the end, where a big tree must be touched, the object being to complete the slalom course — without barging into any of the poles — in the shortest possible time.

Steaming afternoon

Two teams are formed, the "blue jobs" (helicopter pilots on standby) versus the "brown jobs". It seems to me a loopy way of spending a steaming afternoon, but these are not chaps to loll around.

Next comes Bezant. It is explained to me gravely that this is an example of the close attention the

Supplement to ILLUSTRATED LIFE RHODESIA, 7th August, 1975

RLI gives to cultural matters; that Bezant is in fact a game dating back to the Phoenicians, when it was known as Byzantium — this fascinating fact having been unearthed by blue-stocking RLI researchers.

I nod gravely back; and we proceed to the Bezant field nearby.

The technicalities are complex, and the source of much intense discussion. Finally the pitch is marked out, consisting of a circle drawn in the dust, and an empty tin can positioned some metres away.

A wooden club is placed in the middle of the circle, and each player has to whirl himself around this, bent over so that his forehead touches the club butt.

He must complete eight fast circles, everyone counting; then leap up, club in hand, race towards the tin and attempt to strike it as far as he can.

In fact of course, he is so dizzy that he invariably lumbers off wildly, club swinging, in the opposite direction, like an elephant stoned on marulas, or sometimes collapses altogether in a gyrating heap.

2.15 pm: The Bezant tournament comes to an end, the players wildeyed and dust-caked, and me having laughed to much that the mascara is running down my cheeks. The OC arrives back from a trip away from camp, very immaculate in beret, sunglasses etcetera, and stands on a rock surveying us somewhat coolly, I think.

2.30 pm: Some excitement, which I am aware of, but am only told of much later. A few days back, a 1 Commando patrol discovered a disused terrorist camp, and through what Maj Lockley describes as "intuition and assessment", decided to check the area thoroughly.

Tense atmosphere

Now they've struck oil, in the shape of two terrorists sitting on a boulder. The 1 Commando patrol calls upon the terrorists to surrender, whereupon they promptly open fire.

The RLI men return the fire, and both terrorists are killed. A third terrorist is is then discovered hiding under a rock, and is captured.

There's a tense atmosphere of expectancy back at the camp, but for the reserve men, it's a case of waiting it out, and drinking tea when in fact they're itching to be out there in the thick of it.

However, it'll be their turn tomorrow — duties are allocated by means of a strict roster system. Should there be a general callout, so compact is the camp that a single shout would serve to alert everyone. They'd be kitted out and ready to go by the time the helicopters are at the take-off stage: about two and a half minutes.

5 pm: Time for a shower and clean-up. Soon the bar will be open. There's no hard tack, merely because it's difficult to keep track of liquor which has to be doled out by the tot, and regimental accounting is scrupulous.

But everyone can have as much beer as he wants, in the evenings. This is never abused, Lt Scott-Donelan tells me, and thus no limits have ever had to be imposed.

5.40 pm: A helicopter arrives with the captured terrorist. He is immediately handed over to the Special Branch for interrogation.

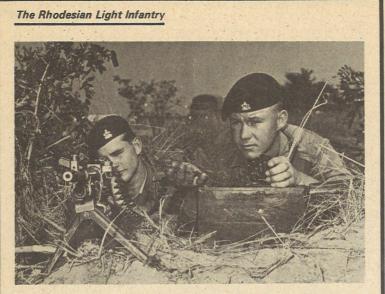

As soon as possible, they will give Maj Lockley a preliminary debriefing, and on this initial report he'll commence planning for an operation — subject, of course, to the results of further interrogation of the terrorist.

This could comprise putting in a long-term ambush on a known terrorist contact.

6.15 pm: Dinner — curry and rice tonight. Lt Scott-Donelan takes me to one of the tents to interview the troopies.

Firstly I talk to two National Ser-

Young Rhodesians at war. "Incredibly ... you have no fear at all, and methodically follow what you've been taught," comments one new RLI soldier of a contact.

vicemen, Troopers Michael Hislop and Mark Tatham, who are being released on the morrow to return to the "bright lights."

Michael, an electrician in civilian life, gestures at the surrounding panorama of sunset, shining water and impala grazing on a nearby plain, and says: "For me, it's certainly been worth it, especially coming to a place like this."

Mark comments that he's had such a good time that he's tempted to join the regular Army.

I then speak to a regular soldier, Tpr John Wilkinson. Just 18, John joined the RLI in November, 1973, and has until recently been chafing at the bit because of the rules restricting under-18-year-olds to sedentary, non-operational duties.

Now, though, he's off the leash and delighted about it. He says he loves bush life, and has appreciated the opportunity to see Rhodesia during his travels with the RLI.

Worthwhile experience

Later I speak to another National Serviceman, Tpr David Gunns, aged 18. At the time of writing, he'd been in the RLI for eight months. He specifically applied to join the regiment.

"I knew that by going to the RLI, I'd learn what the Army was all about, and thus make my National Service a worthwhile experience," he says. "It's certainly turned out to be so. I enjoy the bush and the fact that in a commando you never know what's going to happen next."

Sgt Peter White is 23, and has been three and a half years in the RLI, which he joined because he was looking for adventure - "and I've found it," he says.

That's the understatement of the

vear. He himself accounted for six terrorists in a three-day follow-up after a land-mine incident.

The security forces began tracking the terrorists, who ignored calls to surrender and opened fire. In the subsequent contact and pursuit, at one stage Sgt White, an expert tracker, was alone, and suddenly found himself confronted by two terrorists.

Mining degree

Suffice to say he's here to tell the tale (albeit reluctantly - like most RLI men, he obviously flinches from the thought of talking about himself) and says that although he has a mining degree - and could therefore make his way well in civvie street - "I can't see myself leaving the Army. I'm too involved with it now; it's my life."

7 pm: One of the lads brings out a guitar, and everybody gathers round for a singsong.

There's no specified bedtime; like everything else for those on stand-by, that's a personal decision - but the camp is usually quiet by 9 pm

There'll be little sleep for the OC or for the other officers and senior NCOs tonight, though. At 9.30 pm the Special Branch officer returns to Maj Lockley with a more detailed debriefing, necessitating adjustments in his schedule for the next day.

Planning and orders will thus be issued late into the night, for the first-light move of ambush parties.

Laughter and fun there may be during 24 hours with an RLI commando, but the paramount concern and desire of them all, from trooper to major, is to see that they contribute their best to the war being won.

26

An on-the-spot tactics pep talk. Indicating a point of interest is Lt David Scott-Donelan, second in command of 1 Commando when I was there.

THE SUPPORT GROUP

They're poised and ready to go into action at a moment's notice

THE 1st Battalion, The Rhodesian Light Infantry is split into four: there are three commandos, and a support group. Though the support group in many ways functions as a commando, it's rather more specialised, concentrating on mortars, reconnaissance and tracking.

I visited Support Group while it was doing Fire Force duties — that is, on immediate stand-by ready to race out and lend a hand wherever necessary — and talked to its acting OC, Lt Peter Farndell.

Lt Farndell was originally in the Corps of Military Police, but after completing an officers' selection course, he applied to join the RLI, and has now been in the regiment for two years.

"In time of classical war, we act in a support role using, in the main, our mortars," he told me. "Therefore all of us have to be qualified mortarmen, and this is achieved by sending members on courses to the School of Infantry to qualify.

Retraining periods

"These men then return as instructors to tutor the others in our sub-unit. During our retraining periods, we also carry out mortar instruction.

"Despite this aspect, we are of course basically infanteers, and in the current war we operate as a commando. Therefore today we could be engaged in mortar work, yet tomorrow going out on a normal patrol. Support Group thus fulfils a dual role and is entirely flexible." On the day that I visited Support Group, they were on stand-by, as Fire Force — in constant readiness for a call. Kit was packed in the trucks, but as regards personal supplies, each man would carry three days' rations, should Support Group be summoned.

4425

What sort of calls do they get?

Control from the air

Lt Farndell gave me an example: "We could get a call from the JOC asking us to go to a certain spot where terrorists were known to be or where a contact was actually in progress, and X number of sticks of men were required. I would control the operation from the air.

"After a contact, mopping up has to be done by Fire Force; also any follow-up action. Then Fire Force returns to base to await the next call-out.

"We've been very busy recently; there were four calls the other day. Some of these, of course, transpire to be false alarms, but we respond to each one."

Talking of false alarms, I wanted to see how swiftly Support Group could be mobilised. Some of the men were whiling the waiting hours away by playing volleyball (though kini cricket — a game of mini cricket played with a baseball bat — is also popular). Others were lying on their stretchers reading.

Lt Farndell pressed a button and a raucous hooter blared. Instant frenetic action: the stand-by pilots scrambled to the nearby helicopters; the volleyball game broke up

The Rhodesian Light Infantry

Left: The RLI troopie represents the cream of the crop. Standards are high, and as regards National Servicemen, an RLI selection team travels to Depot RR Llewellin Barracks, to hand-pick their quota. Abseiling is just one of the skills learnt.

THE SUPPORT GROUP,

abruptly as its erstwhile players leapt for their webbing.

Then they ran to the waiting lorries, doing up buttons and cramming on hats as they went — a few half-finished Cokes were taken along too, to be swigged on the way to the airfield.

As the lorries were about to rumble off, Lt Farndell beckoned them back: there was "no sweat", as the Army phrase goes ... the female journalist had just been making a pest of herself.

(But she was vastly impressed, though — it had taken just one and a half minutes from the time that Lt Farndell pressed that button, until the lorries started moving, to assemble the men.)

I was struck by the motley garb. Everyone wore at least one piece of camouflage clothing, but the variations on that theme were many and remarkable.

Matter of choice

I asked Lt Farndell about uniform regulations, and he told me: "Gear is left to the soldier himself. He's got to carry all the basic equipment of course — so many magazines, etcetera. But the rations he selects himself, as long as he has sufficient to last him for a minimum of three days — and clothing too is a matter of personal choice for the most part."

The RLI feel that the more comfortable a man is, the better he fights. Long tight denim trousers may look smart, but when you're charging into a contact in a 38 deg C climate, PT shorts are infinitely preferable and more practical.

Some soldiers wear shirts, others stick to singlets; shoes range from veldskoens to tackies, and socks are generally as rare a sight as velvet smoking jackets in that neck of the woods.

Part of the work that currently occupies the Fire Force stems from land mine incidents. When a vehicle has hit a mine, the message is radioed through as soon as possible to Fire Force, who collect engineers with mine detectors, and a medic in case of casualties at the scene, then hasten to the spot.

Rotation for all

The trackers follow any spoor and sometimes this will lead to a contact, and the capture of the terrorists responsible for laying the mine.

I asked Sgt Maj Philip Payne if the men enjoyed Fire Force work which comes around every four to five months.

"They love it," he said emphatically. "Those having to stay behind as reserves often beg to come along. But we rotate them all — except for the medic, caterer and mechanic, of course — and so everyone gets a frequent turn to go out."

Lt Farndell added: "We actually cover two Fire Force areas. Where there is a pre-arranged large-scale attack, Fire Force will be the main assault group, so you're guaranteed action."

An integral part of each day is the arrival of ill or injured African villagers, seeking medical attention. Usually this is confined to minor ailments, but whatever the problem, Fire Force will attempt to help out.

Sgt Mike Kerr told me of a recent incident wherein terrorists poured paraffin over a villager and set him alight. Support Group arrived at

The Rhodesian Light Infantry

Left: Their hunting ground is a rugged one, peppered with crags and gorges, riddled with waterways. Here, the RLI prepare to land.

THE SUPPORT GROUP

the village, and the terrorists promptly fled, leaving the man to burn.

Support Group men immediately extinguished the flames, administered first aid, and summoned a helicopter to fly the victim to base. There he received detailed medical attention, and when I arrived to interview Support Group several weeks later, he was walking about, albeit heavily bandaged, very conscious of the fact that he owes his life to the RLI.

Support Group are only too happy to help people, because it cuts both ways — they're extremely grateful for all that the Border Patrol Welfare Fund, the Rotary Anns, and the general public have done for them and for the RLI as a whole.

Feature film

Troops' "comforts" from these sources range from deep-freezes to bell-jars of piccalilli, but each item is much appreciated, be it large or small.

As regards entertainment while they wait, they have a good supply of books and magazines and games equipment, and at the camp I visited, a feature film was shown two evenings a week.

A portion of every dutiful husband's / son's /boyfriend's leisure time must of course be devoted to writing home. Men aren't always the most imaginative of scribes, and thus it was that an RLI thinktank came up with a cyclostyled pro-forma, which goes like this (inapplicable portion to be deleted by sender):

Dear Mary / Jane / Betty / Joan / Jill / current crow / housekeeper; I hope you are fine / not feeling depressed / longing for me to come home / maintaining a favourable bank balance.

WEATHER

The weather is bright and shining / raining cats and dogs / overcast / cold / warm / stinking hot / fine and splendid.

MORALE

Thanks for the letter / goodies box / when are you going to get around to writing? / baking?/ The last goodies

box was good / fair / poor / pathetic / haven't received it. Your last letter was too long / too short / interesting / boring / not enough on the sports page / still waiting for it.

DOMESTIC

I hope you are looking after my car / cars / landrover / bicycle / lawnmower and are complying with the following points: checking the tyres / oil / water / cleaning it every day.

FINANCE

(Policy Statement.) Spending is our main concern. To this end I hope you are complying with the family / shared budget and not exceeding approved expenditure. Have you paid the following? Mess bill (no winges); HP; wages; other domestic accounts; your private clothing account must be a last priority.

ANIMALS Have you bathed / de-ticked the following: dog / cat / fish.

BRATS

Please give the brat / brats / and future brats my love and ensure that: they are regimentally disciplined; their noses are cleaned; their nappies are starched. Hope all single ladies are still in perfect health; if not, take the big bottle twice daily.

SOCIAL SCENE

As per normal, I am behaving immaculately, but am finding it difficult to keep up with the hectic social scene. I hope that you: have locked yourself up at home / are not drinking on my mess bill / are watching TV and going to bed every night at eight o'clock / for the single ladies — leading a nun-like existence.

Hope to hear from you soon, Love / yours sincerely / regards / yours faithfully, John / Jim / Tim / Mike / Dick / Sam / Harry / Tom ... etc. etc.

The RLI's rest and retraining periods fall this way: out for a month, back for 20-days rest and retraining. Yet though there's no place like home, as the song goes, you'll see a lot of cheerful faces on the day that the lorries roll back to the "sticks".

For Support Group, as with the rest of the RLI, the job that's waiting to be done is an eminently stimulating and satisfying one.

Right: A word of advice from instructor to pupil during a course run by Regimental Wing at the School of Infantry.

IT'S NO PUSHOVER At this school

Courage, determination, initiative and integrity ... these are just some of the qualities that the staff of the School of Infantry look for in a new recruit. When they find them, they take that recruit and mould him into a leader

HE School of Infantry is basically the maternity home of the Rhodesian Army," says the commandant at the time of writing, Lt Col T. M. (Tom) Davidson.

"Whilst we may not actually train each one of its members, all officers and instructors in the Army, involved in training, have at one stage passed through here."

He says of his job: "I think this is one of the finest commands one can have. You're relatively independent here; and you don't suffer from some of the frustrations that other officers in the Army experience, in that you can see the fruits of your work all the time, especially with regard to the cadets as each course progresses.

"We have at the School of Infantry the cream of officers and NCOs in the Rhodesian Army — I can get most people that I want. The calibre of these men under my command makes working here very pleasant."

COL Davidson is the ideal commandant of an institution where many students are in their early twenties. The communication gap might loom large indeed were a crusty colonel of the old school at the top.

Col Davidson (who at 34 was one of the youngest men to date in the Rhodesian Army to become a lieutenant colonel — and that was just three years ago) is no Colonel Blimp.

He enjoys contemporary music and modern clothes — in fact, he is legendary as the first officer in the Army to appear in the mess wearing a coloured shirt. Those were the days when everyone entering those hallowed precincts was clad in a sort of civilian uniform of white shirt, dark suit and regimental tie.

He leaves the School of Infantry in August, 1975, when, as a full colonel, he will be appointed deputy commander 2 Brigade, and director of projects.

I asked his successor-to-be, Maj George Lloyd, for some biographical notes, and he wrote: "Born in Bethlehem, not under a shining star, but in the shadow of the Drakensburg in the Orange Free State.

"Educated in the Transvaal where I was kicked out of kindergarten for not shaving. Joined the Rhodesia and Nyasaland Staff Corps in 1956. Commissioned after attending the first cadet course held at the School of Infantry in 1959."

Platoon commanders

What are the aims of the School of Infantry?

Col Davidson puts them this way: "To prepare and conduct training courses for officers and other ranks of the regular Army, Territorial Force and Reserve, as directed by Army HQ; to train officer cadets to fit them for service as regimental officers in the regular Army.

"To train selected National Servicemen to fit them for service as platoon commanders, or NCOs in an independent company; to keep abreast of the latest doctrine within the Army, thus ensuring that tactical training dissemination on courses is consistent with the roles of the Army; to evaluate and report on new methods, ideas and equipment as directed by Army HQ from time to time."

Headquarters, School of Infantry (which, with the commandant and his staff, includes Services Corps, Signals, Education, Military Police, Medical Corps and Engineers personnel) is split into three wings: tactical, cadet and regimental.

Let us examine each one of these in turn. Tactical wing, whose OC is Maj P. J. E. (Pat) Hill, provides tactical courses for Army members ranging from lance corporals to majors.

COURSES involve both classical warfare and counterinsurgency, or COIN, taught in theory as separate entities for the most part, though Col Davidson says they are interrelated.

"We tend in this country to split the two only because COIN is the immediate problem, whereas classical warfare is the long-term threat.

"However, on our company commanders' course, for example, our aim is to give officers sound training up to battle group level, in classical warfare — and we revise COIN and internal security operations up to unit level. The entire course lasts 10 weeks, of which seven are spent concentrating on classical warfare."

Cadet wing, whose OC is Maj M. F. (Mick) McKenna, copes with regular officer cadet courses, and National Service leadership training courses.

Maj McKenna comments: "The most important of these is the

training of the young regular cadet — the man who will become a regular officer in the Army of the future. To this end, we run a 54-week course which covers a very broad spectrum of military knowledge.

"The regular cadet courses include instruction in tactics, artillery, combat engineering, armour, organisations, administration, staff duties, a support weapons course including instruction on mortars and machine guns; military law, map reading, pay and accounting, military history, drill, PT, current affairs and English — modernyouths appear to have certain difficulties in writing grammatically, and the tendency seems to be towards phonetic spelling. We attempt to put this right.

"Then there are the specialisation periods: two weeks at the School of Signals, two weeks on a driving and maintenance course, and so on."

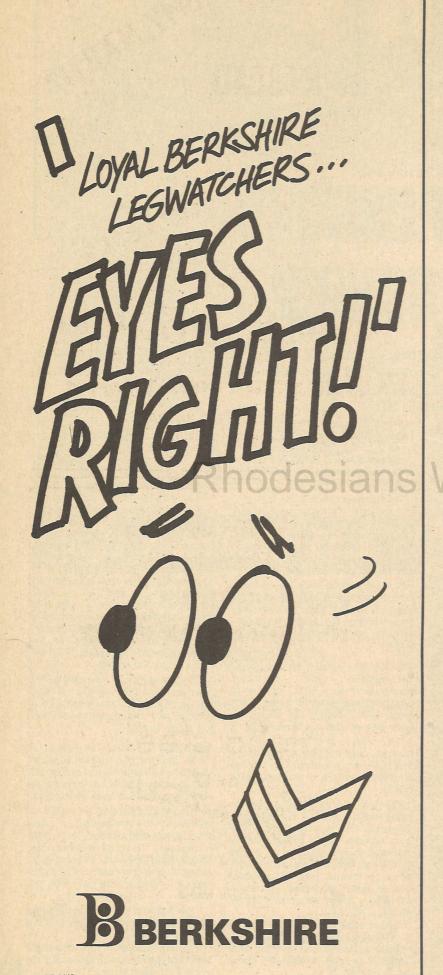

WHEN I visited the School of Infantry, the current batch of cadets was about to set off on the self-reliance and bush familiarisation course, which lasts a fortnight.

"We concentrate on the skills required for the position of an infantry platoon commander," says Maj McKenna. "But of course, the chaps get a good fundamental grounding in other aspects of Army work — artillery is just one instance.

"We modify the course to some extent every year, in order to keep right up-to-date."

Why the inclusion, in such a tight schedule, of the more esoteric subjects such as military history?

"There are tremendous lessons to be learnt here," Maj McKenna

HIS SEHI

replies. "The old adage of history repeating itself is very true."

Like all officers and instructors at the school, Maj McKenna has served for lengthy periods in the operational areas during his Army career, so he is talking from experience and not from mere theoretical knowledge.

He says: "I can't think of anyone here who hasn't been right up at the sharp end. This gives you the ad-vantage of having practised what you are now preaching, and thus you do so with confidence and authority.'

F his young charges, he com-O ments: "We ask a hell of a lot of them ... but we get a lot in return. We set a high standard, because of the sort of war we are fighting.

"A few weeks after leaving here, a young officer could find himself 50 miles from his nearest superior, so we've got to be sure that he is totally equipped to cope with any situation. The Rhodesian Army will be placing a lot of men's lives in his hands.

All cadets take an initial turn living in barrack rooms — "it's good for team spirit," Maj McKenna remarks - but later, regular cadets progress to what is known as the "hotel," wherein each cadet has his own comfortable bedsitter.

The regular cadets' mess is an attractive living-room and bar, complete with fireplace, easy chairs, TV and stereo. This is their own lair, which officers enter only on invitation.

The National Servicemen's mess, which has just been completed, is even more of a showpiece: I peeped under the dust covers and saw furniture which would grace the most elegant of private living-rooms.

(In fact, all personnel at the school have impressive messes: the African WOs' and sergeants' mess, as just one example, has a cocktail bar and stereo set as well as a TV room — and outside, a vine covered patio, complete with ping-pong table and garden chairs, for relaxing on warm evenings.

There are two grades of African

sonnel: newly-weds move into thatched rondavels with electricity, and containing a Handigas stove. After a spell there, they are entitled to one of the twobedroomed houses, each of which has its own piece of garden.

Sporting facilities for white and black personnel alike are excellent and varied throughout: rugby, football, squash, tennis and swimming are available. The School of Infantry normally fields a fine rugby team which travels far and wide

But back to cadet wing, and to the National Service leadership training course - which is not exclusively an officer training course.

This is how it works: every six to eight weeks, when the Registrar of Defence Manpower calls up an intake, the resultant crowd assembled at Depot 1 RR, Llewellin Barracks, are given information concerning the leadership training course. Volunteers for this are called for.

The selection board is usually chaired by Lt Col Hugh Rowley, CO Depot 1 RR; and a School of Infantry team sits upon it to choose its group.

S AYS Maj McKenna: "I should stress that we're looking for POTENTIAL leadership it doesn't need to be fully developed as yet. Courage, determination, a practical bent, initiative, integrity (both towards others and himself,) a sense of responsibility ... these are the qualities we want in a candidate.

"We are not looking for supermen, just good guys who can be relied upon to get on with a sound job of work.'

Psychiatrists aren't included on the selection board - "no one can choose an officer like another officer," Maj McKenna believes.

The first six weeks of the National Service leadership training course is spent versing the men in basic soldiering.

The second phase concentrates married quarters for school per- on developing leadership potential.

IT'S NO PUSHOVER AT THIS SCHOOL

During the third phase, the men are trained to be leaders at platoon level, in a COIN setting. The entire course spans 19 weeks.

The School of Infantry

Rank decisions are made towards the end of the course — "though of course, we formulate our own ideas as time goes on." Whether a trainee becomes a second lieutenant, a sergeant or a corporal, depends upon his overall performance during those five months.

The new leaders rejoin their intake at depot, in command ap-pointments, and move off to an independent company.

I was driven around the school grounds by Col Davidson, who pointed out various features to me: the assault course; the rifle ranges a 12-target, 1 000-yard range and a 30-yard range for 9 mm weapons; grenade bays (all of which add up to complete infantry facilities for weapon training - even mortar practice can be carried out in full); a simulated helicopter; a comprehensive library; lecture rooms; a huge indoor drill shed nearly completed; the sports fields; and a sandpit which at first struck me as incongruous until Col Davidson explained that here "sand models" are demonstrated, the sand providing a more flexible medium for some tactical displays and lessons than would a cloth model.

Then it was on to regimental wing, whose OC is Maj R. J. (Bob) Davie, and which runs instructors' courses for Regular, National Ser-vice and Territorial Force officers, and European and African soldiers (the latter mostly from the RAR) on drill, weapons and mortars; and Territorial Force squad drill and section weapons instruction courses.

MAJ Davie says: "The only of-ficers' course we run is the young officers' weapons course. A young subaltern does a year in his unit, then comes to us for the officers' weapons course.

"As regards European and African soldiers' courses, the syllabi are the same, apart from minor variations in content. Overall, though, the progression in an instructor's career is the same for African and European soldiers.

"The idea is that any trained soldier - from trooper to sergeant may be selected to attend squad drill and section weapons instructors' courses, which are designed to produce an instructor competent to train recruits."

section weapons instructors'

courses are attended for the most part by regular soldiers and National Servicemen, though the occasional Territorial Force battalion member may sometimes be amongst the group.

Once a student has passed the appropriate phase of the basic course, he can attend the advanced courses. He has to pass the squad drill phase to become eligible to attend the ceremonial drill instructors' course.

Having passed the section weapons instructors' phase, he can attend the platoon weapons instructors' course and the mortar instructors' course.

Another course is the methods of instruction course: a leader may possess much military knowledge, but he needs to know how to put it across to his men. Points in this course include the correct way to put a question; how to prepare lessons in terms of length of time and content; how to categorise content into what pupils must/should/could know.

ILR/4432

S with the rest of the School of A Infantry, regimental wing's techniques and syllabus are under constant self-appraisal for anachronisms, so that these can be instantly eradicated from lessons in the military context, what is today a satisfactory weapon or technique can tomorrow become outmoded.

Said Maj Davie: "Napoleon said, 'you can do anything with bayonets except sit on them.' Accordingly, if you have enough good instructors, you can achieve anything; without them, you can do nothing. Our sol-diers use their weapons to kill, and we train them to win.

"So first-class regular instruc-tors are vital, and to this end we are constantly working to build up an elite group of instructors.

"In recent years, we have been training National Servicemen instructors with the intention of creating a cadre of top-grade Territorial Force instructors — and they have attained high standards, so far.

"Through them we will be able to call up large numbers of reinforcements, when necessary, and train these men to be good soldiers within a fairly short space of time."

Visiting the School of Infantry is an inspiring experience. Examine the institution in detail, and you realise why it is that Rhodesia's Army is of such a high calibre. "We train them to win," as Maj

The European squad drill and Davie puts it; of the school those five words say it all.

Trucotto and BOUTIQUES

Left: A Signals post in the operational area. The corps is multi-racial; African signallers are an integral part of it, and one of the most remarkable aspects of this unit is the esprit de corps and happy atmosphere.

'SWIFT AND SURE'. Is their motto

Communications are a vital part of the modern-day army. The Corps of Signals sees to it that units in the field get the best possible service

Corps of Signals

That was the cost of a complete Signals station in 1797. This particular version, known as the radiated telegraph, was the brainchild of the Chaplain General of the British Army, the Rev John Gamble (formerly a mathematics don at Pembroke College, Cambridge).

Brushing aside his master's stipulation that it was more blessed to give than to receive, he sold his invention to the Army.

Common pivot

Its five arms radiated from a common pivot. Only the two horizontal positions and the three others at 45 in the upper quadrant were used. More mobile than its forerunner — oddly enough, also created by a gentleman of the cloth, the Archdeacon of Man — it was used with success during the Peninsular Wars, and also on a line from London to the East Coast.

Gamble subsequently improved upon his first version, evolving a six-arm rope and pulley machine which was ideal for ship-to-ship use. In the hope of seducing the Lords of the Admiralty into going overboard as regards this magnificent machine, he erected a sample on one of the towers of Westminster Abbey, where those august gentlemen could not fail to see it each time they crossed Whitehall... but they remained singularly uninterested.

Nowadays, of course, no branch of any Armed Service would be without a strong Signals unit, and the Director of the Rhodesian Corps of Signals, Lt Col A. H. G. (Gordon) Munro, comments: "Signal communications are the chief medium by which military commanders exercise command and control.

"Communications are an essential function of command, and form an important part of the fighting resources at the disposal of commanders. It follows that, in the main, tactical communications will follow the chain of command.

"Modern warfare relies on increasingly sophisticated signal equipment at all levels in the battlefield. In addition, the employment of small groups of all arms operating over greatly increased distances emphasizes the increased importance of signal communications to commanders.

"If the standard of operation, maintenance and security of these communications is not of the highest order, the enemy will be materially helped to win the battle, and our commanders will be restricted in their full use of their men and weapons.

"Commanders and staffs must therefore use communications to the maximum advantage as they do their other fighting resources. It's the responsibility of signal commanders to advise on how this can best be achieved."

Technical supervision

South African born Col Munro himself has been in Signals throughout seven-eighths of his Army career.

He joined the Rhodesia/ Nyasaland Staff Corps as a sergeant, in the Signals branch, and when the Rhodesian Corps of Signals was formed at the break-up of the Federation, Gordon Munro was squadron commander. He was appointed Director of Signals in December 1973.

The main roles of the corps can be summed up this way: the coordination and provision of communications (radio, radio teleprinter, line and signal dispatch service — SDS) down to unit HQ level; technical supervision of all Army signal communications; repair of all signals equipment used by all arms; advice and help in training signallers of all arms and services. The corps has many subsidiary roles, too numerous to detail.

The Signals Directorate is situated at Army HQ, Salisbury, as is the Army Communications Centre and there are signal squadrons serving throughout the Army. An essential section of the corps is the School of Signals, at Bulawayo's Brady Barracks.

I visited the school and talked to the commandant, Maj D. K. (Kim) Christianson, who told me: "There's an HQ block which houses myself, my adjutant, European and African RSMs, and an orderly room sergeant.

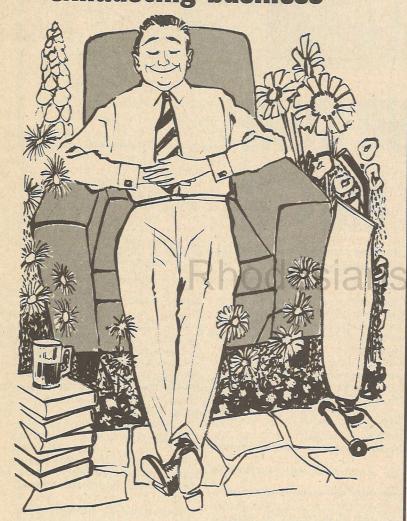

"Then there are the Q stores and mechanical transport section. The training portion of the school comprises three wings: the National Service wing, the Communications and Tactics wing, and the Technical Wing.

"The National Service wing is responsible for training National Servicemen after their first phase at Depot RR, as corps and regimental signallers — they are then posted to various signal squadrons and independent companies. The training they do here varies between eight weeks (for regimental signallers) and 13 weeks (for corps signallers).

"The Communications and Tactics wing is basically responsible for training all regular signallers as operators. Our task is fundamentally to train corps signallers — this includes officers both TF and regu-

ESIDENTS

Rhodesian Corps of Signals

Right: The Rhodesian Corps of Signals possesses an impressive array of sophisticated equipment. Its highly qualified technicians are trained both at the School of Signals and at Polytechnics.

lar — but because of anti-terrorist operations in recent years, we've also taken on the job of training regular regimental signallers, which include men from the RAR, RLI and SAS, for instance.

"Furthermore, we run regimental duties courses which include basic drill and weapon training.

"The Technical Wing copes with the technical training of corps signallers, and is exclusively for regular soldiers. The most important course here is a 15-month radio technician's course - the longest course presently run in the Rhodesian Army, I believe.

"Upon completion of this course,

dents receive virtually individual attention as with any other military school - "we make sure people learn," says Maj Christianson.

'SWIFT AND SU

The Rhodesian Corps of Signals is mounting a pilot scheme at present for the training of African soldiers as technical assistants; eventually, it is hoped, they will undertake the appropriate trade tests

The corps motto is "Certa Cito" – meaning "Swift and Sure." "We try to live up to this," says Col. Munro.

The corps is sponsored by G Branch, but in civilian terms, its fairy godmother is the Municip ity of Hartley, which had adopted the corps.

Orsmond, was away, but he asked came recognised by mortals as the me to represent him.

"Hartley was then in the process of becoming a Municipality. Before his installation, the first mayor wrote to Army HQ, asking if the town could adopt a signal squadron.

"We thanked him, but suggested instead that the corps itself, rather than a single squadron, might be adopted. He replied that Hartley would be delighted to do so, and the formal adoption ceremony was part of the general celebrations when Hartley became a Municipality in 1974"

patron of travellers. Despite this hectic schedule, he also found time to invent astronomy, mathematics and the alphabet - and to pursue with enthusiasm the fair sex, one result of this particular activity being his siring of that original juvenile delinquent, Pan.

The Rhodesian Corps of Signals Officers' Handbook, in relating the legend of Hermes, concludes: "He was not afraid of taking on more than his share of help and could be relied upon to make that extra effort which makes the difference between a good job and an excellent one. Altogether an appropriate person for us in the Rhodesian Corps of Signals to wear as our emblem."

THE MFN

F SIGNALS in July 1974)

RHODESIA, 7th August, 1975

a signaller becomes a qualified radio technician."

The Technical Wing also provides basic courses in telegraph techniques of shorter duration, and a variety of technical upgrading courses.

Radio and telegraph technician training isn't the whole signals story, of course: the trades of fitter and electrician come into it too.

Testing equipment

Regular officer cadets from the School of Infantry come to the School of Signals for a two-week course in radio and operating procedures.

Another important task of the School of Signals is the testing of any pieces of equipment with an electronic bias, acquired by the Rhodesian Army.

1974 was a peak year for the School of Signals: 620 students passed through it. At any one time the school may well be running up to eight courses simultaneously, with as many as 160 members under training. Nonetheless, stu-

This all began when Salisbury and Bulawayo signallers were striving to get together at some convenient shooting range in order to practise jointly, so that a signals team might be selected for the Army Weapons meeting.

C OL Munro recounts: "The only available range within reasonable distance was the rifle range of Hartley, controlled by the member in charge of Hartley Police. We obtained permission, and went down there to practise two years in succession, and thus got to know well the people in and around Hartley.

"Police Reserve members would arrange matches; we'd be invited back to private homes, and gradually close ties were formed between the Corps of Signals and Hartley.

"Because the townspeople had been so good to us, we arranged for the Signals band to go down there in June, 1972, and we laid on a retreat ceremony. The director of signals at that time, Lt Col N. I.

Reciprocal visits

Since then, there have been a number of reciprocal visits; and Hartley has been most generous to the corps, donating a goodly sum, part of which has gone to Signals Welfare, and part to the Signals Wives' Association, chaired at the time of writing by the director's wife, Mrs Mona Munro, and formed firstly to cater for the needs of signals wives, and secondly to send "glory bags" from time to time to those signallers on active service.

The Rhodesian Corps of Signals' badge, depicting a replica of Mercury, the Roman God, sculpted by Giovanni de Bologna (but surmounted by a Zimbabwe bird, detached) is a significant one.

Although the wing-footed figure "Swift and Sure" — is that of Mercury, he was an adaptation of Hermes, the Greek God, named as God of Athletics and of Fertility. He was given his winged shoes by Perseus in return for a favour Hermes being a philanthropic sort of a chap.

His major role became that of Messenger of the Gods, and he be-

ERMES' magical lyre (for he it was who discovered the sound of music) was so coveted by Apollo that he coaxed Hermes into exchanging it for a wooden staff, which was reputed to be able to produce concord out of strife.

(To demonstrate this, the staff was placed between two warring snakes, who promptly entwined themselves around it in eternal friendship.)

This, too, is a good symbol of a factor which is inherent in the Rhodesian Corps of Signals. Maj Christianson remarked on the fact that because of the fascinating nature of the work, it is seldom that transfers to other corps are sought.

Perhaps the reasons for this go somewhat deeper, though; Col Munro puts it this way: "Speaking in general terms, the esprit de corps in Signals is very high, and the envy of a lot of others. All members are intensely loyal to the corps and to its aim."

And as a signals wife myself, I can heartily endorse that.

AG's (Adjutant General's Branch

<u>AG's</u> (Adjutant General's) Branch

Left: The Adjutant General, Lt Col John Thompson. This photograph was taken during a final parade at Depot RR, when he was commanding officer there

<u>Rhode NEVER A DULL MOMENT</u> IN THIS JOB

One of the busiest men in the Army — that's the Adjutant General

HE Adjutant General," my soldier husband told me, "is one of the busiest men in the Rhodesian Army."

When I interviewed Lt Col J. L. (John) Thompson, I discovered just how very true that is. The colonel likens A Branch, his realm, to the heart of the Army.

In that case, he can be likened to a cardio-thoracic surgeon, ready to step in swiftly with cool efficiency and precision, easing blockages, making excisions or grafting on where necessary; transplanting new vigorous life where the old equivalent needs replacing; and generally reducing blood pressure (at whatever cost to his own!) He took up his present post at Army HQ, Salisbury, in May 1974; and says of it: "This is probably one of the most interesting jobs in the Army."

His department covers a wide panorama indeed, and he has a comparatively large staff at his disposal. His three majors each run separate sections, supervised overall, of course, by Col Thompson himself.

Let's look at manpower first: this is responsible for promotions and appointments for the entire Army, both regular and territorial; and all administrative matters relating to public relations; complaints of any kind against the Army, and the publication of orders and instructions appertaining to personal aspects.

This major's staff consists of a captain, a WO2 and a lady clerk.

Last but not at all least, there's the planning section. The major in charge of this deals with all aspects of administrative planning, including career planning, officers' promotion policy; the revision and updating of regulations, and proposals for changes to conditions of service.

Now a brief look at the public re

commendations through the Chief of Staff to the Army Commander.

What's a typical day in the life of an adjutant general? Col Thompson says wryly that the only typical element is the fact that he's bombarded from the moment he walks down the corridor towards his office.

office. "It would be nice to arrive at work, get into one's office, collect one's thoughts, and plan the day. My biggest problem, though, is the fact that there are generally three or four people standing outside my door, waiting to see me ... people who require instant answers to their problems. "The other bugbear is that in HQ there are a good many conferences! It's not unusual to have three or four a day, and this all takes time." A N example of one such confer-ence would be the discussion of policy formation as regards some point. Col Thompson would call in the directors of the relevant corps, and unit commanders, and the resultant thrashing out might well occupy most of one morning. Two burdens have, however, been lifted from the shoulders of the adjutant general in recent times: the drafting of regulations and amendments to regulations, once the responsibility of the adjutant general is now dealt with by the director of legal services (who also advises the adjutant general on boards of enquiry, courts martial, and all proceedings of a legal nature); and the manpower side of personnel has been taken over by Army pay and records. Nonetheless, A Branch's sphere of influence is still a vast one: the heart of the Army indeed — but thanks to the skill of the chief surgeon and his hard-working staff, the body's alive and well.

Early interest

Col Thompson was bitten by the Army bug when he was still at school — Plumtree, which at that time had a flourishing cadet corps.

"I'd had a leaning towards the Army right from early childhood, since my father was a member of the Southern Rhodesian Staff Corps," he says. "During my schooldays, I took a keen interest in the cadets, and ended up by being one of the school's three 2nd lieutenants. However, the young John

However, the young John Thompson's father was against him taking up a military career — and so after school he joined the Irrigation Department.

But after 15 months of this existence, he had to conclude that he was not in the right profession, and so in May, 1952, he joined the Army.

He spent two years in Malaya with the RAR, and later on he had several years as adjutant with the RLI. personnel.

It copes with conditions of service; attachments to and from other armies, officers' selection boards; confidential reports; discharges; resignations and retirements; transfers and postings; the publication of all orders and instructions of an administrative nature.

THE staff in this section alone consists of the major, a lieutenant, a WO1, a WO2, and a senior lady clerk.

Then there's the personal services section, which deals with all matters pertaining to the personal side of administration. These include all annual reports, audits, boards of enquiry, every matter of a ceremonial nature, archives, the control of the central registry, the administration of all civilians employed at Army HQ, policy matters regarding the medical directorate, the army bands, the corps of chap-lains, etcetera; discipline, including district and general courts martial; policy regarding dress (uniforms, that is); honours and awards; policy regarding messes and canteens; insurance; visits, both internal and those involving civilians; welfare; publicity and ations segment of Col Thompson's many-splendoured umbrella: the adjutant general can be compared with the managing director of a large advertising agency.

Public relations

He commands the public relations department, ably managed by Rhodesian Army PRO Capt Geoffrey Bond, photographs being supplied by the official Army photographer, Peter Eaton. An essential part of this section is recruitment, under the energetic leadership of Maj Nick Lamprecht.

Col Thompson's A branch acts as sponsor for the A Services and Corps, such as the Rhodesian Army Medical Corps, the Rhodesia Corps of Military Police, the Rhodesian Army Pay Corps, the Rhodesian Army Education Corps, the Corps of Chaplains, and Legal Services.

It's up to Col Thompson to sort out any matter from a policy point of view regarding these corps, passing on his findings and re-

IODESIA, 7th August, 1975

whether the artillery chaps are setting up press-ganging traps outside the Senior Citizens' Club, let me hasten to reveal the identity of the septuagenerian — it's the 13-pounder which belongs to the Artillery Association and stands on proud and gleaming guard outside the unit's headquarters at Cranborne Barracks, Salisbury.

It sums up what artillery is all about: the powerful deterrent that every self-respecting Army maintains, to act as its strong arm in time of classical war.

Rugged terrain

Present anti-terrorist warfare such as the Rhodesian Army is currently waging is generally fought out in rugged terrain amid thick bush veld, and thus doesn't often afford the Artillery Regiment all that much scope — though the unit has on a number of occasions during the past nine years played a vital and honourable part in contacts.

Maj Ian Pullar, OC Depot Rhodesian Artillery, and Training Officer 1 Field Regiment, wears There followed three years also on mortars in the RLI which is still his parent unit. He thereafter attended a number of artillery courses, finally qualifying as a gunnery instructor. He's been in his present post for two years now, and is genuinely enthusiastic about his sphere of work.

"I enjoy it very much," he says. "It's different from infantry work, though many people don't seem to realise that. You can't just pluck someone out of infantry and make him an instant gunner. It takes a number of years for him to become proficient."

Depot receives its regular batches of National Servicemen as soon as they have completed their first phase at Llewellin Barracks — "then they come to us and start their training as artillerymen, and spend the rest of their National Service period with us.

"It's an interesting and varied course, I think, covering subjects such as gun drill, signals, map reading, survey and counter-insurgency from the infantry point of view; tactics and driving.

Gun positions

Maj Pullar explains: "The survey course entails getting the exact grid reference of gun positions, and putting guns on to a common grid. It's a fairly specialised business."

Artillery bristle at any suggestion that they spend most of their time polishing up 25-pounders at depot.

"We spend a lot of time on operations and exercises out of camp," says Maj Pullar, "almost as much time in the bush, in fact, as does a regular unit. We've just had a very good training camp. We called up 300 and took them on an exercise in the Buhera district."

Maj Pullar showed me round the training hangars, and we stopped to watch a group of National Servicemen being taught basic drills, positions in action, and the names of different parts of a 25-pounder (which weighs 4 000 lb, by the way.)

This weapon is now known more fashionably as an 88mm, which title refers to its calibre. Though dating back to the Second World War, it's reorientation."

Southern Rhodesian artillerymen fought with distinction as a Rhodesian battery during the 1939-45 war, in North Africa and Italy. Though disbanded during the early part of Federation, a core remained in the form of a voluntary Governor-General's saluting troop.

An artillery unit as such was reformed just before the dissolution of Federation. Depot Rhodesian Artillery came into being seven years ago.

As is often the case in a smallish unit, there's a strong esprit de corps, and a tangible example of this is the attractive gunners' canteen created by the men themselves with minimum expense and maximum ingenuity — the bar surrounds, for instance, are made from old packing crate wood planed down and varnished, and now looking surprisingly like knotty pine.

And though ear drums are protected most carefully on duty (no man without ear defenders on is permitted to fire a gun) it's a different story after 4.30 pm when the magnificent canteen stereo, also paid for by the unit, pounds into life. \bullet

The Rhodesian **Corps of Chaplains**

> **Right: Shona Bibles were** recently presented to the RAR. Here, an African catechist, Sgt Tiri Varomba, talks to RAR troops about the gifts.

"I know it's none of my business, Mr Capp, but ..." says the vicar, and then launches into a reproachful detailing of Andy's iniquities. Andy listens, poker-faced. "You're partly right, vicar," he says eventually - and then, as he's disappearing round the corner - "it IS none of your business."

Maj The Rev John Fall isn't that sort of vicar, happily for the Rhodesian Army — and neither is his colleague, Lt Col the Rev Nor-- and neither is man Wood. Both are intelligent, sensitive men with the two extra ingredients which matter so much (yet often lacking) in gentlemen of the cloth: Kipling's "common touch"; and a good sense of humour.

Lovelorn troopie

In short, they are entirely ap-proachable: I'd bet my bottom dollar that anyone in trouble, from a lovelorn troopie to a melancholy menopausal colonel's lady, would find solace, good advice - and possibly even pause for a gentle,

fare

The Army has its material welfare section which sees that the boys on the border are well supplied with goodies and comforts, ranging from free cigarettes and sweets to deep freezes and pingpong tables. But man does not live by Peter Stuyvesant alone; and in a community beset by continual stresses, both emotional and physical, there's a definite and perpetual need for counselling.

This is where the chaplains step in, and amazing and technicoloured indeed are the variety of problems dumped into their capable hands.

"A chaplain's an impartial observer," Padre Fall explains. "Though a man, he's also a priest, and concerned for the welfare of all parties

"Because he's a minister of religion, he can keep his trap shut when necessary, whereas a regimental officer might in some respects be obliged to pass on certain information to his superior officer.

"The chaplain has right of access to any member of the Army, from the general downwards. He's permitted by his terms of reference to take immediate action - for in-

through any intermediaries. He also knows his way around the Army, and can often get things done with minimal delay."

Parish priesthood

John Fall came out to Africa in 1949 to join the BSA Police, and served in that force until the mid 1960s when, as he puts it, "it became born in me that there was a job that required doing and was worth doing ... so I went and did it (with the bishop's concurrence, of course!)"

After three years at St Paul's theological college in Grahamstown, he became a deacon and served title in the Lomagundi district, Rhodesia. There followed the usual pattern of parish priesthood, until he joined the Rhodesian Army in 1969 as a chaplain.

"There's only one occasion when an Army chaplain isn't regarded as a necessary nuisance," he says "and that's when there's a casualty or fatality. It's our job to inform the next-of-kin, and I can tell you that this doesn't get any easier with practice.'

lain waits until early the next morning before breaking the news.

Of course where true fatalities are concerned, it's never just a case of breaking the news, then promptly driving off. Sometimes the chaplain will have to spend all morning with a bereaved family such as the time that Padre Fall had to make this sad visit to the wife of a Territorial Force soldier who had been killed on duty.

She lived in rather an isolated spot, and her only neighbours were away. Padre Fall tried without success to reach her parents on the telephone.

He could hardly leave her alone in her distress, with just a puzzled toddler for company, so he waited there with her until — three hours later - he finally managed to contact her family.

Fortunately, this unhappy duty doesn't occur all that often. Nonetheless, the greater part of a chaplain's working week is taken up with welfare problems of some sort.

Officially, one of the duties of any officer in the Army is to look to the welfare of his men, but when he's new to the unit, or where,

_THEY PROVIDE ______ A Shoulder to Cry on

perhaps, personality incompatibilities exist, sometimes there's hesitancy on the part of a man in trouble to confide in his OC.

Whereas, once he's met the chaplain and got to know him, "Padre" seems the obvious wailing-wall.

As Padre Fall says: "The longer I stay in the Army, the better I become known, and the more readily men will want to confide in me. So I go around drinking people's tea and wasting their time, but there's a reason for this: to build up a degree of confidence in me.

"Let's face it, most men owe no church allegiance, and know no clergymen personally, so there isn't usually any question of having a parish priest to go to.

"P ART of my job in the Army is to perform baptisms, weddings and funerals as any parish priest does — but with no strings attached. Nobody feels any obligation to me, because I'm paid by the Government.

"Of course, it's a different situation entirely in the forward areas that's the raison d'être for an Army chaplain."

Padre Fall makes at least one trip, sometimes two or three per month, to the operational area, spending up to 10 days touring around. He'll visit not only unit headquarters but numerous small call signs.

There's an old rhyme that goes this way: "Higamous hogamous, woman's monogamous. Hogamous, higamous, man is polygamous" and when men are away from home for weeks at a time, the sad truth is that some will be tempted to stray from the marital straight and narrow.

When Padre Fall with the all-seeing eyes visits a small community and witnesses evidence of certain frolics after hours, does he drop a word in the culprits' ears?

Management course

He shakes his head. "You know, I took a course in business management recently. I found the communications section the most fascinating. It's the responsibility of the originator/sender of a message to ensure that the reaction of the recipient is congruent with his intention.

"Thus, it's all very well to say that it's the responsibility of a priest to preach in season and out of season, but if you're merely making people sick of you, you're not achieving congruence."

O F course, the chaplain's welfare work doesn't concern itself solely with the menfolk in the Army; in fact, Padre Fall says that he wishes more uptight wives would come to him for a chat when they get that stop-the-world-Iwant-to-get-off feeling.

A few prayers

"Say I pitch up in the afternoon — well, first I'll have a cup of tea with the OC, then ask the senior NCO to call the chaps around for a natter and a few prayers.

"I'll tell them that I intend to hold a Holy Communion Service the next morning, and that anyone who would like to partake of it, provided that this is not going against his conscience as regards his own religious beliefs, will be most welcome."

The Rhodesian Army chaplaincy is non-denominational. Padre Fall himself is an Anglican; Padre Wood a Baptist but both minister to people of all denominations.

Though around 45 per cent of Rhodesian Army members are nominally Anglicans, for the sake of the sensibilities of the other 55 per cent (12 per cent Roman Catholic, 10 per cent Dutch Reformed, 33 per cent other religions) Padre Fall is careful never to plug Anglicanism.

"Part of the job of any clergyman is to evangelise ... but not to go around pinching other people's sheep."

Supplement to ILLUSTRATED LIFE RHODESIA, 7th August, 1975

"I'm not a surrogate husband perish the thought! — but I'm a shoulder to cry on, and I want to be used that way. Too often a military wife left on her own for weeks on end builds up emotional stress and resentment.

"There she is, coping alone with the kids, household responsibilities, financial worries, and sometimes also a job of her own.

"When the old man comes home, she's tempted to take it all out on him... and when the only thing he has on his mind is to be loveydovey, she gets even more angry because he's not interested in hearing about her troubles.

"That's when a quarrel starts. I'd like these wives to ring me up and pour it all out to me instead. That way, they'd be able to greet their husbands with a smile."

John Fall says, with that deadpan expression you recognise with delight once you know the man: "Our family motto is 'Falls rush in where angels fear to tread'."

In truth, this particular "Godbotherer" treads very carefully, gently and wisely. He and his colleague are an indispensable part of the Rhodesian Army.

I DF ALL W

Building bridges and destroying them, laying mines and lifting them: in other words, keeping troops on the move and doing everything possible to hold up the movement of the enemy ... this is the function of that highly-skilled technician — the sapper

HAT is a sapper?" I asked Lt Col Michael Pelham, the Director of the Rhodesian Corps of Engineers.

In reply, he showed me an article which he had just written for the Rhodesian Army magazine,

"I had no idea that I would join the Army until I did my National Service," he says. "I went into the Army with the first National Service intake into engineers.

He knew instantly that he had found his niche; and in 1961 he signed up as a regular soldier.

four-month stint at the RLI, and should he be deemed eligible, he's then sent to the School of Military Engineering at Brady Barracks, where he completes a 10-week course.

Course will be in progress, and that ultimately the majority of his African engineers will be as fully qualified as their white colleagues.

The School of Engineering also supplies infanteers with a basic "This is very basic," Col Pelham training in engineering: for in-remarks. "Then he's posted to a stance, regular officer cadets attend the school for a fortnight in order to learn the fundamentals of military engineering. Similarly, National Service officer cadets do a two-day crash course there.

Engineers

Assegal.

The feature begins with Dryden's description of a sapper: "This versatile genius is, not one but all mankind's epitome, condensing the whole system of military engineering and all that is useful and practical under one jacket.

"He is the man of all work of the army and public - astronomer, geologist, surveyor, draughtsman, artist, architect, traveller, explorer, antiquary, mechanic, diver, soldier and sailor; ready to do anything or go anywhere; in short, he is a SAPPER."

Deep affection

What of the present director himself?

At 34, he's the youngest lieutenant colonel currently serving in the Rhodesian Army, but he has a wealth of experience as regards both military engineering and infantry work — and a deep affection for and pride in the corps he leads.

Born in Cape Town, he was educated at St George's College, Salisbury.

Col Pelham says of his profession: "Whatever anyone else in the Army can't do, we sappers do!

"It boils down to this: The engineer is responsible for providing mobility as regards our troops, and doing everything possible to impair the mobility of the enemy. We have an additional role: that of works.'

Mine laying and lifting, demolitions, all aspects of explosives, the laying and lifting of booby traps, the disarming of parcel bombs, the supplying of water to troops in the field, the operation of all boats belonging to the Rhodesian Army, dog handling, the construction of roads and airfields, erections of diverse obstacles, including fencing and anti-tank obstacles, the construction of field defences ... these are but a small part of the corps' brief.

'Major trench works too - if an HQ wanted to go underground, we'd dig it in. We're responsible for major items of plant, such as bulldozers and graders; for field machines, and aerial ropeways, which can be likened to ski-lifts.'

Despite this specialisation, the military engineer starts his Army career as an infanteer. He does his

unit. At some stage, depending upon the progress he's made, he's returned to the School of Military Engineering, where he undergoes a four-month course, known as the Class 2 Course.

Individual tuition

"Completion of this qualifies him to take charge of an engineering detachment in the field. (He's by then qualified to staff sergeant level.)

The corps hopes that the most advanced course of all, Class 1, will soon be implemented. This will be of six months' duration, and only a dozen students at a time will be catered for, as the complexity of the work is such that individual tuition is essential.

Another ambition is to enter Africans for Class 2 courses. Up until now, Africans accepted into the corps first completed the normal recruits' course at Depot ASC, Inkomo, then underwent a threemonth basic course in engineering.

Col Pelham hopes that by the end of 1975, the first African Class 2

Col Pelham's chief desire is to compartmentalise the corps: "I'd like to divorce the artisan section from the portion which supplies combat engineering support in the field.

"At the moment, we have the situation in which a carpenter, for example, might be busy working on some item at HQ, when he's sum-moned by his OC, told to pack his bags and move off immediately to the operational area to lift mines. This doesn't make for the most efficient use of manpower.

"Mind you, it's essential that any engineer can fill any post and tackle any job. Our motto, 'Ubique' - 'Everywhere' - puts it in a nutshell.'

The corps is in the happy position of not having to search for recruits in fact, there's a waiting list of Europeans wishing to join the corps

Col Pelham subscribes this interest to the absorbing nature of the work, and also to the fact that

Since the beginning Bulawayo has honoured brave men...

For more than 80 years Rhodesians have proved to be a brave nation and during this time the City of Bulawayo has been proud to honour those of all races who fought or fell whilst serving their country.

In Main Street you will find the Garden of Remembrance honouring all Rhodesians who died in the two world wars, and more recently in the fight against terrorism. Close by is the memorial to the Matabele Rebellion of 1896. The Allan Wilson Memorial near Rhodes Grave at Worlds View" in the Matopos is world famous — as is the picture of the Shangani Patrol in the City Hall. Today men of all races in Matabeleland are high on the list of brave servicemen who fight defending their common land against the terror on our borders.

Brave Rhodesians - whatever your race - we salute you !

one instance of this, during my SAS days.

"I was the only engineer in the unit, and I had to go into a particular area which was relatively inaccessible, and build three bridges there within a short space of time. The only labour I could get hold of ted of local tribesmen supplied by the district commis-sioner."

tracing the keys to the box - "and the suspense of waiting and wondering what was going on in that box was terrible," he says frankly.

"Actually, when we finally managed to open the box, we found a parcel of clothes inside - it had all been a hoax. But every report of

mendous amount of dust, of course, and as it cleared, I got out of the trench, accompanied by a student from an advanced demolition course I'd been running.

"We had a look at the wall: it was a perfect job, I thought. Just the portion meant to be demolished had

It's patent that Col Pelham enjoys his job to the full. What's the main appeal of sappering?

> "The challenge," he says. "There's always something different, and every problem requires a new approach, and thus initiative. This is true for all engineers, but it's particularly so in my job. This morning for instance, I attended a meeting concerning precautions to be taken against landmines.

> "Then I had some problems to sort out pertaining to roads in the operational area. Now I'm engaged in research concerning boats.

Engines for boats

"Should the Rhodesian Army require a new boat, it's up to me to determine what sort of engines the craft should be fitted with, how many men it could conceivably how the interior lay-out carry, should be, and so on. I consult with naval architects, and together we modify the basic design.

"As an engineer, you can retain your individuality. Sometimes, you work entirely alone. I remember

Totally untutored and primitive though his assistants were, Mike Pelham duly completed those bridges within the deadline.

The Rhodesian Corps of Engineers have got one captured terrorist to their credit: this happened during Operation Mansion a few years back.

Col Pelham recalls: "The area had been swept. We and some Special Branch officials took a prisoner back to the district to look at a specific cave in an area that we suspected might be booby-trapped. When we got to the place, we found another terrorist hiding in the area, and captured him.

"We'd love to do an infantry role and get into the field like the artillery, but our commitments don't permit this."

However, the engineers have more than their fair share of hairraising moments. Consider the time that it was reported that a bomb had been placed in a certain letter box. Col Pelham was called out by the police to deal with the matter. There was prolonged difficulty in

this nature has to be dealt with as if it were the real thing.

"No engineer ever remains on bomb disposal work for longer than six months at a time — the strain is too great."

Incident in Ndola

Clangers, in the engineering context, are usually monumental ones by virtue of the nature of the work. Col Pelham will never forget a certain incident in Ndola during his time with the SAS.

He recalls: "The Ndola Barracks had been built as a new barracks for the Selous Scouts and the SAS to occupy. A range had been constructed, but after a number of months the soil subsidance and cracks in the walls were such that it was considered too dangerous to

"So the OC of the SAS called me in and said that he wished a portion of the wall to be demolished so that it could then be rebuilt.

"I did my calculations and planted the explosives. At 4.30 pm, detonated it. There was a trebeen destroyed. I was congratulating myself on this fantastic effort when the student tapped me on the shoulder and said quietly: 'Sir, there are no windows left in the barrack blocks."

"I turned round, and could see right through five blocks. All the windows had been knocked out by the blast. Well, being a dutiful officer, I went straight to the OC's house and said to him: 'Sir, I have blown down the wall . . . but I'm afraid there's been quite a lot of damage to a portion of the barracks as a result.

"He looked at me, and merely said: 'Give me a complete list of the total damage.' I duly supplied this and it read: '357 windows, 1 chandelier, 2 double garage doors, an asbestos roof.'

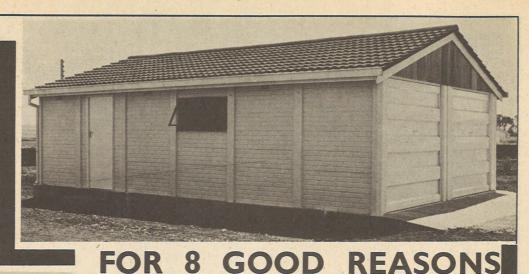

"He was sitting at his dining room table when he received this. He took one look at the list, turned it upside down, and said to his wife: Marge, please bring a crate of beer.

The impromptu party - or wake somewhat sweetened the pill, for young Lt Pelham, of having to face the inevitable Board of Enquiry. This is the sort of risk an en-

gineer constantly runs; but on the other side of the coin, there's frequently the satisfaction of accomplishing a job impeccably - and when that task requires minute calculation, there's an extra sense of achievement.

Col Pelham remembers the 90 ft brick chimney at a brick and tile factory outside Bulawayo, which had to be demolished. The chimney was positioned between two buildings which had to remain unscathed

Col Pelham laid out a tape between these buildings, and the chimney was felled on that tape as neatly and precisely as if a giant hand had carefully laid it there.

Such moments, to a sapper, whatever his rank, only serve to increase his conviction that he wouldn't swop his job for any other

malnutrition that the men instantly gave him what little water and food they had left themselves - the food being baked beans - but the sustenance came too late, for he died shortly afterwards.

When the word got around, Services received a signal from some wag who shall remain nameless: "Congratulations on your first kill."

Tinned goods are only a part of the provision story, of course. Services run butcheries in both Salisbury and Bulawayo, from which fresh meat, dairy goods and vegetables are regularly sent up to base camps. The quality of the meat and all other produce is top grade. Rhodesian soldiers are fed on the best their country can produce.

Army cooks, once a music-hall joke, are now a very different kettle of consommé, and when the Army's in party mood — at balls, luncheons, cocktail parties, and as regards outside catering such as weddings, which Services sometimes undertake -- no Robert Carrier cookbook illustration could rival the spread produced.

IR re-supply is vitally impor-A tant to an Army operating often in remote and rugged areas.

gineers, the Corps of Military Police, the Rhodesian Defence Unit, and Services sections such as workshops - where they will receive their specialised training.

Says Capt Combrinck: "We have many applications for each course. The starting pay is good - \$36 to \$38 a month — and since accomodation, medical attention, rations, schooling for children, etcetera, is provided, that \$38 is virtually pocket money.

"Our recruits are between 18 and 24, mostly unmarried. The minimum educational qualification is Standard Six, or Grade Seven, unlike that for Infantry; our recruits will be going to more intellectual posts, such as clerical jobs, and an IQ test is also part of our selection course."

Brawn and brain

This selection course lasts a week, in which the applicants are thoroughly screened by Capt Combrinck, CSM Wilson Mawarire, and another member of Services Training. Sgt Maj Barry Taylor of the Educational Corps handles the IO tests.

Naturally, brawn as well as brain comes into it: applicants must fulfil a number of physical requirements, and undergo a comprehensive medical examination. Then re put through thev demanding routine, including a five-mile run which must be completed within a certain time; and a variety of exercises.

Training period

"Parachutes can otherwise cost between \$300 and \$500 apiece, and the normal type of re-supply chute therefore always had to be recovered, because of its expense, for future use. So we devised the disposable version - locally-made and it's served us very well."

I wanted a look at Services' training for Africans, and so I visited Captain Lynn Combrinck, OC Training Wing, Services Corps, at Inkomo Barracks. He told me that the basic training period is fourteen weeks.

During this time, recruits are versed in all facets of Army life, from square-bashing to classical warfare, counter-insurgency training, map-reading, and voice procedure.

After the passing-out parade (which includes the selection of the best recruit on course) the new soldiers are posted to units such as the Corps of Signals, the Corps of En- for the Rhodesian Army.

N EXT comes the tackling of the assault course. Here, a man's performance will reveal any lack of co-ordination or phobia about heights. Then comes the astonishing bit: a boxing routine.

Why boxing? "This is a very important phase," says Capt Combrinck. "It's useful psychologically to see how a man reacts to any sort of aggression. Very few of our recruits have ever boxed before, so they're all on an equal footing, and we try to pair them off with regard to size.

"All told, we're quite proud of our training programme, although not many people appear to realise that we're dealing with this aspect." He adds with a wry smile: "We in Services seem to be known chiefly as storemen.

Whereas in truth, far from only catering for that important military belly Napoleon referred to, Services supply the very life blood

are: "Hitler was constantly looking over his shoulder at his soft underbelly"; "I would use the artillery to attack the objective and the Air Force" (bad news for the JOC, that); and "The Allied airborne landings in Sicily were disastrous. In fact, they were almost complete failures."

Fortunately, the complete failures who have passed through the portals of Mil S are few and far between: the directorate's standards are high, as befits an academy concentrating upon the advanced training of more senior Army officers.

Modern methods

But such is the expertise of its team and the modernity of their methods that the intelligent pupil applying himself should be able to achieve a pass.

Yet this success story is only seven years old — and born, as the adage goes, with necessity playing mother to invention.

Prior to Rhodesia's Declaration

After November 11, 1965, this facility was withdrawn by the British.

Hence, the Directorate of Military Studies was begun, its initial raison d'etre to assist young officers at this critical stage of their careers. By the time the directo-rate got off the ground in 1968, there was a hefty backlog of 30 such officers.

The first team was headed by Col A. West (later Brig West); and comprised of Majors Miller (now Col Miller) and Slater (now Lt Col Slater) and Capt T. H. (Tom) Davies - now Maj Davies, and once more a member of the Mil S Staff.

One of the directorate's first "old boys" has since returned as an instructor - Maj E. P. (Peter) Adams. Its director at the time of writing is Col A. B. Campling.

Maj Davies recalls those early days in 1968: "The first time the staff got together, all we had was a

"We devised our course from various sources, and used the same syllabus in 1969, though since then there have been various modifications — we've learnt from experi-ence."

Course withdrawn

Another facility withdrawn by the British at the time of UDI had been that of the Camberley Staff College course. Hitherto, each year a few Rhodesian senior officers generally majors — had been selected to go over to Britain for a year's training at that military college.

The Rhodesian Army was not prepared for its senior officers to lose out entirely on such training, and thus Mil S was tasked to devise a course whereby students could be trained for the posts of Grade 2 staff officers.

The first 21-week course began in July 1970, and was a resounding success.

"Everyone passed," Maj Adams

of Mil S's work, is known as the intermediate staff course - the qualification being referred to as "isq".

The official staff of the directorate comprises the director (formerly Col Campling, but Maj V. L. Walker has recently been ap-pointed the designate incumbent of this post, with rank of lieutenant colonel) and four instructors - Majors Adams and Davies, and Majors B. A. Barret-Hamilton, OLM, and R. E. H. Lockley.

When I interviewed the staff, there was intense activity, since the new captain to major course was about to begin - and much of the material for each course is revised each time - "firstly, in order to keep up to date with military developments; and secondly, for our own benefit, in that after we've done an exercise a few times, we're heartily sick of it; every question which could be asked has been asked."

The staff at Mil S don't allow themselves to become stale. They're vitally interested in the job, finding it intensely rewarding and absorbing.

They'll admit that newcomers to

THEY WAGE WAR IN THE CLASSROOM

the staff often greet their postings with rolling eyes and despair — "the reason that it's regarded a fate worse than death to come here is because it's known that on a staff course, for instance, we work as hard as the students.

"If a pupil has spent five hours preparing a paper, the least we can do is to spend five hours marking it — and that of course goes for every one of those pupils. The instructors spend most evenings and weekends marking or preparing material.

"But after you've been here a month or so your attitude changes; the challenge of the work grips you."

Instructors are frequently sent on visits to institutes of higher learning so that they can keep up to date with developments, and the latest teaching methods.

THEY aren't permitted to do too long a stretch at the directorate, either — "six years on the trot here without a break, and you'd become distinctly funny," says Peter Adams with a grin. Both he and Tom Davies, after their initial stints at Mil S, returned to units for a while, but they've since come back to the directorate — "because we're suited to the work, and because we like it.

Closed-circuit TV

A recent and helpful innovation at the directorate has been closedcircuit television. Col Campling explains: "When we lay on a demonstration or a cloth model, we sometimes require a lot of talent over and above the staff we have here, and so we borrow officers from elsewhere.

"These men have to give up an entire day, and often operational commitments makes this difficult. So in the future, we intend to assemble all the talent, kit and equipment here, lay on a first-class demonstration, and then videotape it".

War games, the in-thing in NATO circles, are nowadays part of the Mil S curriculum.

In a war game the students are divided into two teams, waging an imaginary war against each other in theory and on paper. Each force sits in its own room, where an operational centre is set up, complete with radios and telephones.

In the middle are the staff, who have to determine casualties, tactical victories, etcetera, by means of various tables.

NATO evolved this technique in

order to predict the outcome of possible wars, and have set down guidelines, including tables for the calculation of unpredictable factors — acts of God, such as inclement weather, the death in action of a commander, epidemics and so on; and the quirks of man, such as sudden mutinies or the lethargy of a commanding officer.

Maj Adams cites the case of the Battle of Waterloo — "which might have gone the other way if Napoleon hadn't been ill that day and had taken more interest in it."

Backlog of students

In 1972, the directorate switched to a system whereby one year it would hold a staff course, and the next a captain to major promotion course, comprising both correspondence and full-time phases. In addition the conventions of service writing course was held.

Col Campling comments: "It became apparent to us last year, though, that there was no longer a need for us to be burdened by the CSW course. We were, however, building up too big a backlog of students ready for the staff course.

"M OREOVER, although 16 was the maximum capacity we could handle for the captain to major course, there were far more than 16 eligible for this. So in order to give everyone a fair crack of the whip, we're running two promotion courses this year, and two staff courses next year. "In 1977, there'll be a staff

"In 1977, there'll be a staff course during the first half of the year, and a promotion course during the second."

The captain to major course lasts nine weeks, all of it now full time. The correspondence phase has been abandoned, in view of the current operational situation: captains on active service didn't have time to do much correspondence work, whereas their counterparts in other jobs had the opportunity to tackle this.

Nowadays, everyone's expected to do a certain amount of preliminary work before they arrive at Mil S, but generally all students start on equal footing. They live in for the duration of the course because much syndicate work is done in the evenings, and there are also a lot of weekend tasks to be completed.

I went over to the Beit Hall, where the majority of lecturing is done, to look at the hive of activity there preparing for the forthcoming course. The students had just

their précis, maps and stationery ranging from folders to rubbers.

Here, in the Beit Hall, the captains will be addressed by Col Campling on the opening day of their course; and here, for the next two months, they'll spend a large proportion of their day taking part in syndicate discussions, listening to lectures, watching films and slides, learning from cloth models — which take two instructors up to a day to lay out on the floor — and feverishly watching the pigeonholes in the lobby.

In these "dreaded racks" the staff place notification of impending projects: a paper, for instance, which, placed in the pigeonholes at 4 pm has to be completed by 7 pm. So it's metaphorical egg on the face for the student who neglects to check his pigeonhole until, say, six.

THIS psychological pressure is very much a part of promotion and staff course work — "if you can keep your head when all about you are losing theirs...you haven't read the exercise instructions" is a favourite Mil S piece of fractured Kipling.

On the intermediate staff course, particularly, students are deliberately placed under intense stress for the first few weeks.

Pressure is on

"We give them projects to do but just sufficient time in which to complete these. And we ask for the papers to be handed in at hours such as 11 pm, or 4 am."

The staff closely watch the reactions of students to pressures such as these. The man who maintains his cool, staying unflustered and working steadily to the limit of his capabilities in the time allotted, is the man who'd shape best in crisis of a military nature.

The students understand the reasoning behind the jostling and accept it in good part — "there's been a very good instructor/student relationship in all courses run so far," says Maj Adams. "This is an adult course for adult students."

Col Campling interjects: "But we do organise breaks at the correct psychological times — about every four weeks or so, a morning or a whole day is devoted to golf or volleyball — or perhaps we'll take them out to Lake McIlwaine for the day.

"In fact, we're fairly strong on organised sport as a regular part of the curriculum, partly for its relaxation benefits, and partly because here students and instructors can mix freely."

Though, as with the captain to major course, students live in, a free

BARKER, MCCORMAC DUN 14

weekend is available almost every month so that those men from other centres can go back to their wives and families for two or three days. Holidays such as Easter, Whitsun, and Rhodes and Founders, are also free.

ISC students are lectured to by a galaxy of eminent people — the Prime Minister, the Minister of Defence, the chief executive of ACCOR, the Bishop of Mashonaland, and the chairman of the Standard Bank, are just a sampling of the VIPs who have given up a morning of their time to speak on specific topics at Mil S.

Esoteric subjects

In addition to this, students are taken on guided tours of Government departments and industrial complexes. The object is to provide the staff officer of the future with a broad view of Rhodesia; the blinkered soldier is very much a thing of the past.

Esoteric subjects such as geopolitics are now being introduced into the ISC syllabus; but closer to home is the emphasis being laid upon African traditions.

A S from 1975, all promotion examinations within the Rhodesian Army, ranging from corporal-sergeant to captain-major, include a new subject; that of African customs. One of the aids being supplied is the Soldier's Book of Shona Customs, compiled by Rhodesian author, Phillipa Berlyn, and Roger Howman. This has been issued to every white serving member of the Army; but as a booster, Mil Sinvites Ministry of Internal Affairs experts to lecture to students upon aspects of Shona and Ndebele life.

If you fail ISC, it's highly unlikely that you'll be given the chance to attempt it again, and that failure is apt to mean that your prospects of promotion are diminished.

Thus, the failure rate is very small indeed; even the most notorious "cuffer" knuckles down to five and a half months of hard graft once he enters the Mil S doors.

The director and staff of Mil S aren't content to rest on their very real laurels. They're constantly looking outwards and forwards, discussing and planning new ventures.

A wag once thought up this motto for Mil S: "We know it works in practice, but does it work in theory?"

The staff of the Directorate of Military Studies can laugh at that one because, as anyone who has been through the academic mill there will testify, the theory's doing fine.

THE STORY OF THE STABLE BELT . . .

In British Army Dress Orders of 1811, members of some Cavalry Regiments were given permission to wear girdles. For Officers those girdles were scarlet and gold, while the other ranks wore girdles of yellow and red. These were worn under the regulation leather belts in order to preserve their bright colours and protect the woven material of which they were made.

Many years later, when girdles went out of general use, they continued to be worn in the stables in preference to leather belts, which were kept highly polished for more important occasions.

Thus stable belts were no longer part of a dress uniform, but fulfilled a still-colourful, if utilitarian, purpose.

Nowadays stable belts are worn as unit identification.

Below: An Armoured Car staff sergeant briefs a Scout Car commander for his next task.

THE MEN INSIDE THE STEEL

The Armoured Car Regiment is responsible for a wide variety of duties

- from counter-insurgency operations to ceremonial parades

RMOURED cars thundered into the arena this century in the 1914-18 War, to be precise, when the first tanks bumbled their ungainly but lethal way along the path to the Somme.

Since then, they have been an essential part of any large army's equipment, and accordingly, the Rhodesian Army has its Armoured Car Regiment. commanded the regiment which then had Staghound Armoured Cars.

The regiment was again disbanded in the middle 1950s and then A Squadron, the Rhodesian Armoured Car Regiment (Selous Scouts) was formed with the advent of the Federation of the Rhodesias and Nyasaland. Came the break-up of the Federation, and the conselar with National Servicemen because the comparatively lengthy preparatory training at Depot The Rhodesia Regiment before being posted to Depot The Rhodesian Armoured Car Regiment, has been considerably pruned.

Now within weeks instead of months, those interested can find themselves in a Ferret (the type of armoured car best known to Rhodesians in general, and which simulate different types of terrain, and RhACR officers and senior NCOs demonstrate with the tanks various formations, techniques of crest crossing, and general tactics adopted on the ground.

This is, of course, part of the training for regular members of the regiment too — though a number of Maj Rooken-Smith's men have had previous valuable experience in other armies' ar-

Though this particular unit was born only in July 1972, the history of armoured cars in the Rhodesian context stretches back to the early days of the Second World War, when Lt Col C. V. King took 100 men to Kenya, to serve with the South African Forces in the African campaign — and won battle honours in the ensuing years.

This, the Southern Rhodesian Armoured Car Regiment, was affiliated with the 11th Hussars (Prince Albert's Own).

Cerise and old gold

Today's grandchild of that first regiment, the present RhACR has as its colours cerise and old gold as a token of that long-ago relationship, since the colours of the 11th Hussars — since amalgamated with the 10th Hussars — were cerise and old gold.

With peacetime, the Southern Rhodesian Armoured Car Regiment was disbanded. There was a further reimbodiment in the late 1940's when Lt Col C. V. King DSO

quent disbanding of the squadron.

At long last, Rhodesia acquired an Armoured Car Regiment that was here to stay, when, on the 18th December, 1972, a training officer for such a proposed regiment was appointed — Major Bruce Rooken-Smith.

BORN in Kenya, he came to Rhodesia in 1967 after several years in the British Army. He joined the Rhodesian Army in March, 1968.

Maj Rooken-Smith defines the role of armoured cars in counter insurgency warfare this way: "Escort duties relating to convoys; guarding of vulnerable points; providing direct fire support, road blocks, cordons, and the showing of the flag (an armoured car is a fairly impressive sight); reconnaissance work.

"Where classical warfare is concerned, reconnaissance also applies, of course, but then there is delaying action in the withdrawal; anti-tank actions; flank guarding; deep penetration; the disruption of the enemy in pursuit, and the exploitation of gaps in the advance."

The Rhodesian Armoured Car Regiment is becoming more popuhas featured in a number of marches past).

Training period

For a National Serviceman, the armoured car training takes 26 weeks. During this course, the soldier learns tactics, signals, gunnery, driving and maintenance, and is then available for operational duties.

Maj Rooken-Smith is delighted with the calibre of the National Servicemen he now has under his command — all of the latest complement have gained O levels at the least.

The Rhodesian Armoured Car Regiment is essentially a Territorial unit, with members training on Monday nights and at weekends. Part of the training comprises cloth model exercises: on the day I interviewed him, Maj Rooken-Smith had a pile of boxes containing toy tanks in one corner of his office.

These are used on a table or floor area which has been treated to

moured units.

The RhACR started its life in Cranborne Barracks, but moved into its new home in KG VI Barracks in December 1973, as soon as phase one of the building schedule had been completed. The entire complex should be finished by December 1975, with A Squadron in new quarters at Brady Barracks.

A NOTHER change has been that bears the head of a sable, and the motto used to read: "Asi Sabi Luto". Then the Sindebele experts were consulted (because the RhACR chaps believe in being accurate in everything) and it was found that the wording was incorrect.

Since this was being altered on the badge, it was decided to do away with the old representation of the sable which, some felt, did not quite resemble a sable.

He has now been replaced by a much more ferocious-looking fellow. And the newly-worded version now reads: "Asesabi Lutho", which means in case you were wondering, "We Fear Naught".

What could be more appropriate? •

THE SKY'S THE LIMIT

Thanks to the Educational Corps, the children of African soldiers are getting the best schooling available

NE OF the main aims of the ambitious African in Rhodesia today is education for his children: and so far and wide has the reputation of the Rhodesian Army's facilities in this field spread, that it must rank as one of the prime incentives for the many hundreds of eager applicants.

Sgt Maj Barry Taylor, of the Educational Corps told me that an intrinsic part of the Army's conditions of service is that free education up to Grade seven level is provided for all African children of military personal "Though all our male teachers are, as mentioned, soldiers in effect, our lady teachers — who are employed to teach mainly the Grade 1, 2 and 3 classes — are members of the United African Teaching Services, and of course Government employees. We have several husband-and-wife teaching teams in our schools."

I remember once walking by mistake into one of the classrooms of the African school at Methuen Barracks, and being greatly struck by what I saw. It was a KG 2 class, an airy room filled with sunshine and music, and the small pupils sang and clapped their way through what seemed to be a numbers song — a far cry from the dreary mumble of tables by rote that we had to plough through when I was at primary school. The primary school course culminates in the Grade Seven examination — the all-important entrance qualification for High School. The Rhodesian Army's African primary school pupils have scored well here.

Another important facet of the Educational Corps' work is adult education, for all races.

Courses for clerks

"We lecture to European soldiers

indigenous language of the pertinent area — in effect, Chishona or Sindebele — and to this end, increasing numbers of European personnel are taking such lessons.

All this is the responsibility of the Educational Corps, and a fine job they're making of it. But I must add a mention of the educational project not within the corps that has been started, truly at grassroots level, by Mrs Anne Heppenstall, wife of Lt Col David Heppenstall, CO 1RAR, at Methuen Barracks, Bulawayo.

multary personnel.

"In fact, we provide the full range of primary school education," says Sgt Maj Taylor, who was a teacher and assistant headmaster in civilian life before he joined the Rhodesian Army.

"We have fully trained African teachers who are nevertheless soldiers. They staff schools at Inkomo, New Sarum and Thornhill (though the latter two are Air Force bases, we administer African educational facilities at both centres), 1 Brigade, at Brady Barracks, Bulawayo; 1 RAR at Methuen Barracks, Bulawayo, and at Llewellin Barracks."

The corps doesn't need to advertise for teachers: the rate of pay is such — (\$5-\$10 a month more than the equivalent civilian scales) then free rations, child education, medical and dental care, as added perks — that many applications a month are received.

"Thus," says Sgt Maj Taylor, "we get the cream. In order to keep our teachers up to date with new ideas, we call them in once or twice a year for lectures on the latest educational methods. The walls were bright with paintings, collages and projects, and the whole atmosphere projected happiness and contentment.

On the time-worn premise that all work and no play makes Jack Mawere a dull boy, the teachers encourage non-academic activities too, such as gardening (valuable in a practical sense, because a lot of the pupils eventually go back to settle in their own Tribal Trust Lands); choral work, art per se (Inkomo African School sends regular exhibits to the Lomagundi Show); woodwork, carving - and, of course, sport, at which a high standard has been reached. There are frequent and enthusiastic inter-school competitions.

Hygiene is also stressed, so that girls destined to become housewives in the TTLs will know how best to maintain a healthful environment for their families. up to O level, and also assist those who seek further education," Sgt Maj Taylor told me. "Then we counsel people as regards university education.

"This applies to African soldiers too. Many of them want to learn book-keeping, so we run clerks' courses for all races. The two and a half month course includes typing, office routine, filing etcetera. A good proportion of our pupils emerge with a 30 plus w.p.m. typing speed."

Soldiers who wish to continue with their studies in leisure time while on operational duties, are catered for too. Captain Jackson of the RLI has arranged a system for members of that regiment wherein any man who wants to pursue a specific line of study is provided with recommended books and test papers to take into the "sticks".

He then sends back each paper as he completes it — a correspondence course in the combat zone, as it were; and a diverting method of whiling away the empty off-duty periods.

The Rhodesian Army would one day like to see its entire white complement being conversant in the Mrs Heppenstall has got a playgroup for African pre-schoolers off to a good start, and it should prove a popular and vital outlet for small children living in barracks, who up till now have had little with which to amuse themselves while older siblings are at primary and secondary school during the day.

Mrs Heppenstall invited playgroup expert Mrs Joanne Ward of Salisbury to teach the mothers, on a self-help basis, playgroup methods and projects.

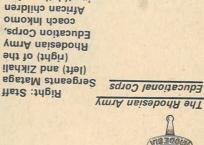

I was there on the first morning, and by noon there were numerous blissful toddlers covered in poster paints from top to toe, but having had the time of their lives.

Clay modelling, collage, song and dance, band music, paper games and gardening were all on the agenda for future busy days.

So, from its first halting steps to its stride into secondary school, the child of an African soldier in the Rhodesian Army is being given the best of schooling care — and for adult soldiers of all races who never quite managed to make it academically before but who are ambitious, the educational sky's the limit. \bullet

pect to be paid, so you find yourself working on a Saturday and a Sunday too.

"But it's a rewarding job; you feel you're really contributing something. And they do appreciate it, you know — for Christmas, I received numerous Christmas cards from RLI soldiers alone." Territorial Force membars and

Territorial Force members are paid out on the spot, as soon as they return to the bright lights. Col Hopkins says that in this respect, the corps couldn't function without the corps couldn't function without the backbone of TF and Reserve paymasters and pay clerks, who handle these matters.

thefaccountant

Some of these TF members are company secretaries and directors in civilian life; on the day that I visited the corps, Col Hopkins pointed out one "troopie" surrounded, like all the others, by ledgers and papers — and told me that this man was the chief accountant of a large industrial organisation. The experience and expertise of The experience and expertise of

Such men is, of course, invaluable. The TF work is often particularly tricky, because of fluctuations in numbers and circumstances. If it's been some time since a certain group was last called up, the chances are that many of the members have in the interim married, and produced children, thus comand produced children, thus comand produced children, thus comment.

A LL told, the Rhodesian Army dollar concern, and Lt Col Hopkins' post can be likened to that of a fimancial director and personnel administrator of an equivalent civilian industrial organisation.

He makes the point on behalf of his staff that administrative work can be just as arduous and demanding, if not more so, than straightforward soldiering.

On the admin side, he says: "This quotation from Field Marshal Lord Wavell sums it all up; "The more I have seen of the war, the more I realise how it all depends upon administration and transportation (what our American allies call logistics).

"It takes little skill or imagination to see where you would like your army and when; it takes much knowledge and hard work to know where you can place your forces and whether you can maintain them there.

"A real knowledge of supply and movement factors must be the basis of every leader's plan; only then can he know how and when to take risks with those factors; and battles and wars are won only by taking risks."

bound. Though Rhodesian Army personnel are assured of receiving their pay every time they return from the operational area (and usufrom the operational area (and usually before being transferred there for a relatively lengthy tour of duty, should members of any unit in action require an interim payment of say \$10 each for pocketmoney, a pay clerk will journey to money, a pay clerk will journey to that camp, however far-flung, and that camp, however far-flung, and

I spoke to WO I Peter Killick, whose last posting was as the RLI paymaster, who said that he has never found his job anything but absorbing and worthwhile. "You're dealing with neonle all

hand out the money.

"You're dealing with people all the time, and quite often in addition to normal pay duties, you help sort out their personal problems." Any problem with a dollar sign

Any problem with a dollar sign attached seems to be brought to Mr Killick. Should a soldier's financial affairs be in a serious tangle, the Pay Corps will help by taking them over entirely until such time as they are completely sorted out.

O CCASIONALLY MY Killick rewife, in despair because she has no money left, the electricity has been money left, and the rent is overdue and her husband is away in the hush

her husband is away in the bush. Here Mr Killick swings into action, as soon as he has satisfied himself that the plight is genuine. He'll contact the husband in question at his unit — by radio if necessary — and ask for permission to remit an adequate amount of money (deducted then from the money (deducted then from the man's next salary) to the wife, to man's next salary) to the wife, to

inspe state

tide her over.

Should the estate agent prove difficult to placate, Mr Killick will intercede here too.

Normally, though, such situations seldom arise, since the RhAPC will, if requested, pay a regular allotment to wives while their husbands are away on operational duties.

The introductory stories produced by soldiers wanting a "sub" on their pay are often so long, complex and colourful that they would put Scheherazade's fables to shame.

To cut this cackle, at one time the RLI pay office pinned up a list of reasons, 1 to 23, which seemed to cover all the usual contingencies, and any supplicant's wordy pleas would be waved aside, with a request for him merely to select the perfinent number on the list!

Mr Killick is inured to irregular working hours. He says: "I've paid out salaries till 1.30 in the morning sometimes. And if a unit comes in over a weekend, the men will ex-

and he wrote and recorded an English commentary, to supplement the ChiShona and SiNdebele counterparts. The English version is now on the commercial cinema circuit.

The Trade Fair and Salisbury Show both mean periods of intense activity for Capt Bond, who has to think up new slants each year to publicise the Rhodesian Army.

If an impact is to be made, the same old format just won't do, so up fresh variations on the basic theme.

Does he sit down and consciously rack his brains? He smiles at this, and says he never has to search for ideas — "fortunately, I possess a 100 per cent creative personality ... but copious hot baths do help!"

Son face

Photographer Peter Eaton is one of the Army's best-liked and most familiar faces — and he's come up with some memorable cameos of military life during the past 14 years.

Though employed by the Army in a civilian capacity, Peter has years of Service experience behind him: he was a member of the Royal Air Force in peace time and then throughout the Second World War, trising to the rank of wing commander.

In 1961 he was appointed photographer to the Federal Army.

A SWITH Capt Bond, Army stands at trade fairs and agtricultural shows involve him deeply: next time you visit such a display, take a good look at the effective blow-ups thereon, and spare a thought for the hours that Peter faton spent producing them in his darkroom.

He's accustomed to working under pressure, though, and nothing ever rattles him — not even the request from a certain unit, as I was interviewing him, for eight copies each of 38 negatives ... by the following morning.

Unlike his civilian alter egos, the Army photographer is rarely given a personal by-line; Peter Eaton is used to this, but he does give a rather wry smile when he sees photographs of his reproduced in military journals of a variety of foreign armies — without a word of scknowledgement! acknowledgement!

A newcomer to the Army HQ PRO and Photographic Section is Li M. L. M. (Mike) Blackman, who had been a member of the Rhodesian Army for just two days when I spoke to him.

He has joined it as a specialist

cinating part of Training's packed programme. "Entering A Kraal" is their latest production: this will be screened for training purposes by departments such as the School of Infantry, and Military Studies, as well as by every unit in the Army where a knowledge of African customs is required.

Training staff members write the draft commentary and script. They're also responsible for "casting". For example, "Entering A Kraal" required 30 RLI troops, a which Maj Graham Noble, a member of Training at the time, nember of Training at the time, porrowed with the permission of that regiment's CO, and duly transthat regiment's CO, and duly transthat regiment's CO.

The Ministry of Information's Production Services unit does the actual filming and technical production, but Training see to the rest.

THEY tell me with justifiable pride that their training films have been so highly regarded that some of them have been purchased by external services. David Lean and Darryl Zanuck, beware!

And Dari yi Zanuck, bewarei From moving pictures to photographs and public relations: Army public relations officer Capt Geoffrey Bond and Army photofice at Army HQ, and it was here fice at Army HQ, and it was here that A Pride of Men was born title and format conceived in the mind of Geoffrey Bond, and many of the illustrations being provided

uem sesbi shT

by Peter Eaton from his files.

Capt Bond is the first PRO ever to be appointed by the Rhodesian Army — in October, 1973, to be exact. In civilian life he was, and is a well-known writer with 20 books to his credit so far, including his excellent and well-received excellent and well-received Remember Mazoe.

He's engaged at present in writing the story of the RLI in his spare time — not that he ever has much of that commodity, since his PR work is a round-the-clock affair.

"My job is to get the Army into the public eye," he says. "I come up with the ideas; obtain the adjutant general's approval, then go ahead with the necessary arrangements, such as contacting journalists, perhaps, for the publicising of a specific topic, or appearing in radio and television interviews."

Combine professional showbiz knowledge and a never-ceasing fount of ideas, and you've got the right recipe for a PRO. Take the new RAR recruiting film: Capt Bond saw wider possibilities for it than had been originally envisaged,
